Key insights into the Indian CV industry

Global News

- The Dow advanced 288.75 points or 0.6 percent to 48,731.16, the Nasdaq rose 51.46 points or 0.2 percent to 23,613.31 and the S&P 500 climbed 22.26 points or 0.3 percent to 6,932.05.
- The Nikkei 225 fell 212 points, or 0.4%, to close at 50,255 on Wednesday, reversing early gains as sentiment turned sour amid a stronger yen that eroded overseas earnings for export-heavy firms. Autos led declines, with Toyota down 1.8%, Subaru off 1.2%, and Honda Motor slipping modestly. Financial shares also retreated, giving back part of last week's sharp rally after the Bank of Japan last week raised rates to a three-decade high. Meanwhile, minutes from the central bank's October meeting showed policymakers broadly agreed real interest rates remain low, reinforcing expectations of gradual tightening and reduced monetary accommodation. On the other hand, tech stocks were mixed but mostly firmer, with Advantest jumping 2.5% in line with Wall Street's overnight peer gains. Tokyo Electron added 0.7%, while Screen Holdings surged 10% to top the index after Morgan Stanley MUFG Securities lifted its price target. Japanese markets will remain open on Thursday and Friday.

Key insights into the Indian CV industry

Discussion with Board Member of a Prominent Fleet Operators' Association

We interacted with an executive member of a leading fleet operators' association to understand the evolving dynamics of the Indian Commercial Vehicle (CV) industry, particularly in the context of GST rationalisation, post-COVID supply distortions, fleet ownership trends, and regulatory changes.

The discussion highlighted that GST arbitrage-driven fleet expansion, rather than underlying freight demand, led to excess capacity in the MHCV segment over the last few years. With recent GST recalibration effective 22 September 2025, irrational buying is expected to subside, paving the way for healthier freight rates, more disciplined capital allocation, and a gradual revival of small fleet operators.

While MHCV demand remains stable and freight-rate dependent, the LCV segment is emerging as a key beneficiary, driven by last-mile logistics, hub-and-spoke supply chains, and GST 2.0 affordability gains.

1. Structural Changes in CV Demand and Supply: Pre- and Post-GST

Pre-GST Scenario (Prior to July 2017)

- Fleet operators paid excise duty, VAT on vehicle purchases, and service tax on freight services.
- There was no comprehensive input tax credit (ITC) framework, leading to more demand-aligned vehicle purchases.
- Small fleet operators (<10 trucks) constituted nearly 70-80% of the MHCV market.

Post-GST Scenario

- Introduction of:
  - 5% GST under Reverse Charge Mechanism (RCM), or
  - 12% GST under Forward Charge Mechanism (FCM) with eligibility to claim ITC.
- Post-COVID, large fleet operators overwhelmingly opted for 12% FCM, claiming 28% ITC on truck purchases.
- This created tax-driven incentives to buy trucks irrespective of freight demand.

Consequences

- Large fleet operators:
  - Expanded owned fleets aggressively.
  - Reduced dependence on hired trucks (largely small operators).
- Market outcome:
  - Fleet size increased, but freight demand did not keep pace.
  - Freight rates declined due to oversupply and intense competition.
  - Smaller owner-operators were crowded out (<40%).

2. GST Recalibration (Effective 22 September 2025): Implications

Key changes:

- FCM rate increased from 12% to 18%
- GST on new CV purchases reduced from 28% to 18%
- Tax arbitrage from vehicle ownership has largely ceased to exist.

Additional industry behavior:

- Large FMCG clients (typically in the 5% GST slab) prefer working with RCM-compliant operators to minimise working capital blockage.

Expected Outcomes

- End of irrational, tax-driven buying.
- Purchases to become demand- and utilisation-led.
- Gradual improvement in freight rates over the medium term.
- Likely resurgence of small fleet operators, whose operating costs are 4-8% lower than large fleet players.

3. Current Demand Environment and Replacement Cycle

- Significant incremental buying occurred during 2015-2017, ahead of:
  - GST transition
  - BS4 to BS6 regulatory shift
- These vehicles are now entering the replacement cycle, supporting baseline demand.
- Secondary market activity is picking up:
  - Large fleets are selling idle trucks.
  - Small operators are re-entering the market as viability improves.

4. Operating Efficiency and Productivity Trends

- Turnaround times have improved due to:
  - E-way bill implementation
  - Better highway infrastructure
  - Technology-led fleet management
- Potential utilisation:
  - 600-650 km/day per truck
- Current average:
  - 350-400 km/day
    - → Indicates meaningful headroom for efficiency gains, especially for organised players.

5. Dedicated Freight Corridor (DFC): Impact on Road Transport

- Eastern and Western DFCs primarily cater to bulk freight.
- Expert view:
  - Last-mile and time-sensitive logistics will remain road-dominated.
  - India is shifting towards:
    - Low inventory
    - Just-in-time delivery
    - Hub-and-spoke models (vs. mother warehouses)

- Rail remains relevant for:
  - Minerals
  - Steel
  - Cement (largely regional flows)

Segmental Implications

- ICV and LCV demand expected to strengthen as last-mile solutions.
- Tractor-trailers:
  - Industry mix rose from ~9% in FY21 to ~22% in FY25.
  - Could see normalization, with demand shifting back towards haulage.

6. Scrappage Policy: Limited On-Ground Impact

- Policy effectiveness remains weak.
- Operators receive better realizations in the informal market, often via cash transactions.
- As a result, scrappage has not meaningfully accelerated replacement demand.

7. Regulatory Overhang: ADAS and Safety Norms

- Industry is supportive of mandatory ADAS in MHCVs to reduce accidents.
- Cost dynamics:
  - Aftermarket ADAS: ~INR 40,000 currently
  - Scaled OEM integration: potentially reduce to INR 15,000 approx
- Upcoming regulations across:
  - Braking systems
  - Safety features
  - Driver assistance
- Estimated vehicle cost increase: INR 70,000-80,000
- Potential for pre-buying ahead of implementation, supporting near-term volumes.

8. OEM Selection Criteria for Fleet Operators

Fleet operators prioritize:

1. Service uptime and network reach
2. Availability and pricing of spare parts
3. Vehicle reliability and lower breakdown rates
4. Quality of after-sales service

9. Segment-wise Impact on CV Sales

MHCV Segment

- No sharp demand spike post-GST 2.0.
- Purchase decisions to remain freight-rate driven, not tax-driven going ahead.
- Seasonal demand skew remains stronger in 2H.

LCV Segment

- Clear beneficiary of GST rationalization.
- Expect 20% increase in demand post rate cuts.
- Driven by:
  - E-commerce
  - FMCG distribution
  - Urban and semi-urban last-mile logistics

10. Competitive Landscape among OEMs

- Tata Motors
  - Gaining MHCV market share over the last 6-9 months.
  - Aggressive price discounting.
  - Recent IVECO acquisition expected to improve powertrain quality.
- Ashok Leyland
  - Historical price premium over Tata (>INR 2 lakh) has narrowed significantly.
- Eicher Motors (VECV)
  - Priced ~INR 4 lakh lower than peers.
  - Strong post-BS6 performance with lower breakdowns, lower maintenance and benefits of refined engine technology from Volvo.

Conclusion from the conversation: Key Takeaways

- The Indian CV industry is transitioning from tax-driven excess supply to demand-led equilibrium.
- GST recalibration is structurally positive, likely to:
  - Improve freight rates
  - Restore balance between large and small fleet operators
- LCVs and ICVs emerge as medium-term structural winners, aligned with logistics, e-commerce, and consumption trends.
- MHCV recovery will remain freight-rate and utilisation dependent, with regulatory pre-buying offering tactical volume support.
- OEM differentiation will increasingly hinge on product reliability, service capability, and total cost of ownership, rather than headline pricing alone.
