Triveni Turbine Ltd. | BUY | TP: Rs 630

Turbine Expert Call KTAs

We hosted an expert call on steam turbines and boilers, gaining insights into industry dynamics, applications, and Triveni Turbine's positioning. Over the years, Triveni has grown by expanding its product portfolio mix, steadily scaling up higher-margin aftermarket services, and aided by favorable end-user industry trends. FY26YTD order inflow was softer than prior years due to weaker ethanol demand, geopolitical tensions, and tariff uncertainties. Despite near-term overhang from the Middle East conflict, Triveni remains well-managed with a strong balance sheet and has meaningful recovery potential on normalization. We are factoring in ~13% CAGR in revenue, EBITDA, and PAT over FY25–28E and believe that risk-reward remains favorable. BUY.

- **Industrial steam turbines market landscape:** Steam turbines in the 1–100 MW range are mainly used for industrial captive power, while turbines above 100 MW serve utility-scale generation. They are broadly classified into reaction and impulse designs. The global 1–100 MW industrial steam turbine market is estimated at US$4.2bn, comprising US$3bn industrial turbines, US$1 bn API mechanical drive turbines, and balance API power turbines. India represents ~USD 0.3 bn (Rs 24–25 bn) of the addressable market. *The industry is expected to grow at ~5.5% CAGR until FY30. Key players include Siemens Energy, GE Vernova, Triveni Turbine Limited, Shin Nippon Machinery, MAN Energy Solutions, Doosan Škoda Power, and TGM Kanis Turbines.*

- **Triveni's Dominance in India's Industrial Steam Turbine Market:** In India, Triveni Turbine Limited commands ~50% market share, followed by Siemens Energy (40–45%) and MAN Energy Solutions (5–10%). *Both Triveni and Siemens have ~200 turbines annual capacity.* Triveni expanded its portfolio from <30 MW to ~55–60 MW turbines through its earlier partnership with GE Vernova, (which has since been discontinued) and entered the API turbine segment in 2016–17. The company is also executing CO_2-based turbines for NTPC Limited (~ Rs 3bn order) while exploring adjacencies such as heat pumps and mechanical vapor recompression. *With domestic leadership, portfolio expansion, and regional opportunities, we remain cautiously optimistic of Triveni's medium-term growth outlook amid geopolitical headwinds.*

- **Industrial Capex and Ethanol Expansion Drove Turbine Demand (FY22–25):** Steam turbine demand during FY22–25 was propelled by post-COVID industrial capex, infrastructure expansion, and ethanol distillery capacity additions. Cement majors such as UltraTech Cement and Adani Group reportedly procured ~30–40 turbines annually in 2022–23. *A parallel demand driver was ethanol distillery expansion, aligned with India's ethanol-blending program, as several sugar companies diversified into ethanol production; momentum moderated once blending targets were largely met*, prompting some producers to divert output to liquor markets. The pulp & paper sector also contributed as plants increasingly shifted from coal to municipal-waste boilers, generating lower-grade steam suitable for 15–20 MW captive turbines.

- **Valuation, view & Key risks:** We retain BUY on Triveni Turbine valuing the stock at 40.0x P/E and 30.0x EV/EBITDA to Dec 2027E EPS and EBITDA arriving at a target price of Rs 630. **Key downside risks:** Geopolitical turmoil and return of trade war**.**

Key Takeaways – Turbine Industry Expert Call

Industry Overview and Market Structure

- steam turbines in the 1 MW to 100 MW range are classified as for industrial captive use, while turbines above 100 MW are generally categorized under utility power generation.
- The global industrial steam turbine market is estimated to be around USD 4 billion in 2026 and is expected to grow at roughly 5.5% CAGR until 2032.
- Major global players include Siemens Energy, GE Oil & Gas, Triveni Turbines, Shin Nippon, MAN Energy Solutions, Skoda, and TGM from Brazil.
- China and Iran are usually excluded from global turbines market analysis as these countries mostly manufactures for their own domestic market.
- Steam turbines broadly fall into two design types: reaction turbines and impulse turbines.
- Reaction turbines are described as more efficient and widely accepted globally, while impulse turbines are typically used in mechanical drive applications where efficiency is less critical.
- Within the global market, industrial applications account for roughly USD 3 billion, while API mechanical drive applications are about USD 1 billion and API power generation around USD 200 million.
- Fuel sources used to generate steam include coal, biomass, natural gas, waste and nuclear, and these fuel choices influence the demand for turbines.
- Coal-based boiler applications account for roughly USD 1.6–1.7 billion of the steam turbine market, although Siemens has chosen not to participate in coal-based boiler projects due to emission concerns.
- Biomass applications are relatively more common in India, APAC and Africa, while oil and gas applications account for roughly USD 400–450 million globally.

Indian Market and Demand Drivers

- India is described as a large and rapidly growing market for steam turbines, driven by sectors such as cement, steel, paper, sugar , chemicals, petrochemicals, and biomass.
- The Indian steam turbine market size is roughly Rs 24–Rs 25 bn annually.
- Triveni Turbines holds roughly 50% market share in India, while Siemens Energy holds around 40–45%, and MAN Energy Solutions holds around 5–10%.
- Smaller players such as Maxwatt, Swan Turbines, Skoda and TGM partnerships also participate in the market.
- Siemens and Triveni both have the capacity to manufacture roughly 200 turbines per year, with both companies typically operating with full order books.
- Post-COVID domestic demand for steam turbines was driven by strong capital expenditure in cement and iron & steel industries, largely due to infrastructure development in India.
- Cement companies such as UltraTech and Adani reportedly procured 30–40 steam turbines annually during 2022-23.
- Another major driver between 2022 and 2024 was the ethanol distillery expansion, which followed the government's plan to increase ethanol blending in petrol. Several sugar companies expanded into ethanol production, creating additional demand for turbines. A slowdown occurred when ethanol blending targets were achieved, leading to a situation where some producers could not sell ethanol to the government and diverted production to liquor markets.
- The paper and pulp industry also saw growth during this period, with several plants shifting from coal boilers to municipal waste boilers, which produce low quality steam but sufficient for captive power generation requirement. These plants typically deploy 15–20 MW steam turbines.

Steam Turbine, Gas Turbine Applications and Economics

- Gas turbines and steam turbines serve different industrial applications rather than directly competing in all situations. Gas turbines are widely used in upstream and midstream oil and gas operations, especially where natural gas is readily available.
- Gas turbines are smaller, more compact and capable of faster start-up, and a 10 MW gas turbine can be roughly one-third the size of an equivalent steam turbine package.
- Steam turbines are widely used in refineries, petrochemical plants, steel plants, cement plants and other process industries, especially where steam is already produced as a by-product.
- Steam turbines can also be integrated into combined cycle systems, where gas turbine exhaust heat is used in a heat recovery steam generator to produce steam. In combined cycle configurations, the steam turbine generates additional power and improves overall plant efficiency (from ~40% to 60%+).
- Steam turbine installation typically costs around USD 100,000 per MW as a thumb rule for initial capex. This cost generally includes the turbine, gearbox, generator, lubrication system, controls and associated piping.
- Steam turbines typically require very little maintenance in the first three to five years after commissioning. Minor maintenance may occur after roughly three years, particularly if steam quality is not ideal.
- Major overhauls generally occur once every five to seven years and can cost approximately USD 200,000–250,000 per turbine depending on operating conditions.

Triveni Turbines Strategy and Competitive Position

- Prior to 2015–2016 Triveni primarily manufactured turbines up to around 30 MW. After its partnership with GE, the company began developing larger turbines in the 55–60 MW range, which helped expand its addressable market.
- Around 2016–2017 Triveni entered the API steam turbine market, which involves turbines used for mechanical drives in oil and gas operations. These turbines are used to drive pumps, compressors, blowers and fans in refineries and petrochemical plants. Triveni identified a supply gap in smaller API turbines and launched single-stage impulse turbines for this market. The company secured early success with large orders from Kuwait Oil Company and Kuwait National Petroleum Company, supplying roughly 200 turbines in the first two years.
- For Indian refinery projects, turbines must be approved by Engineers India Limited (EIL), and Triveni used international installations to obtain these approvals.
- API turbines accounted for roughly 15% of Triveni's total turnover IN 2024.
- The refurbishment and spare parts business is more profitable, with EBITDA margin often around 40–45%.

International Expansion and New Opportunities

- Triveni entered the US market through refurbishment and repair services rather than new equipment sales. The company acquired a small rotating equipment repair facility in Houston and began servicing turbines and other rotating equipment.
- The Houston operation is supported by engineering and reverse engineering capabilities at Triveni's Bangalore facility.
- The US market has historically been dominated by Dresser-Rand (now part of Siemens) and Elliott Ebara, making new equipment entry difficult.
- The expert indicated that Triveni's US operations may have generated roughly USD 100 million in revenue, although profitability levels were unclear.
- The company is also working on CO_2 turbine technology, where turbines operate using pressurized carbon dioxide. In FY25, Triveni received a major order, roughly Rs 3,000 mn from NTPC for roughly 10 steam turbines for a CO_2-based energy storage project. More such orders expected going forward.
- The company is also researching mechanical vapor recompression technology, in collaboration with IIT Chennai and IISc Bangalore, though the product is still in early development stages.

Valuation

Our base case projects revenue, EBITDA, and PAT to grow at a CAGR of 13% over FY25–28E. We have assigned a 40x P/E and 30x EV/EBITDA multiple on Dec'27E EPS of Rs 15.6 and EBITDA of Rs 6,034 million, leading to an average target price of Rs 630.

Exhibit 1: Target price computation

Target price	Base case	Bull case	Bear Case
Average Target Price (Rs)	**630**	**804**	**446**
Implied upside (%)	34.2%	71.4%	-4.9%

Implied upside (%)	33.2%	70.2%	-6.5%
PAT margin	17.9%	18.5%	18.1%
EV/EBITDA-based valuation			
Estimated EBITDA (Rs mn)	6,034	6,934	5,577
Attributed EV/EBITDA (x)	30.8	34.7	23.1
Target price (INR)	634	809	454
Implied upside (%)	35.2%	72.5%	-3.3%
EBITDA margin	21.8%	22.8%	21.8%

Source: MNCL Research Estimates

Our valuation multiples are in line with cap good companies reporting ~20%+ revenue growth and 20%+ ROE/ROCE. Internal estimates suggest a ROE/ROCE potential of 25%+ over the forecast period.

Key risks: Delay in project execution and slowdown in global industrial capex.

General Disclaimer:

This Research Report (hereinafter called "**Report**") has been prepared by MNCL in the capacity of a Research Analyst having SEBI Registration No. INH000000644 and Enlistment no. 5039 with BSE and distributed as per SEBI (Research Analysts) Regulations, 2014 and is meant solely for use by the recipient and is not for circulation. This report does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. The recommendations, if any, made herein are expression of views and/or opinions and should not be deemed or construed to be neither advice for the purpose of purchase or sale of any security, derivatives or any other security through MNCL nor any solicitation or offering of any investment /trading opportunity on behalf of the issuer(s) of the respective security (ies) referred to herein. These information / opinions / views are not meant to serve as a professional investment guide for the readers. No action is solicited based upon the information provided herein. Recipients of this Report should rely on information/data arising out of their own investigations. Readers are advised to seek independent professional advice and arrive at an informed trading/investment decision before executing any trades or making any investments. MNCL hereby declares that it has not defaulted with any Stock Exchange nor its activities were suspended by any Stock Exchange with whom it is registered in last five years. However, SEBI and Stock Exchanges had conducted their routine inspection and based on their observations have issued advice letters or levied minor penalty on MNCL for certain operational deviations in ordinary/routine course of business. MNCL has not been debarred from doing business by any Stock Exchange / SEBI or any other authorities during the last 5 years; nor has its certificate of registration been cancelled by SEBI.

The information contained herein is from publicly available data, internally developed data or other sources believed to be reliable by MNCL. This report is provided for assistance only and is not intended to be and must not alone be taken as the basis for an investment decision. The reader assumes the entire risk of any use made of this information. Each recipient of this report should make such investigation as it deems necessary to arrive at an independent evaluation of an investment in Securities referred to in this document (including the merits and risks involved) and should consult his own advisors to determine the merits and risks of such investment. The investment discussed or views expressed may not be suitable for all investors. This information is strictly confidential and is being furnished to you solely for your information. This information should not be reproduced or redistributed or passed on directly or indirectly in any form to any other person or published, copied, in whole or in part, for any purpose.

The information given in this report is as of the date of this report and there can be no assurance that future results or events will be consistent with this information. This information is subject to change without any prior notice. MNCL reserves the right to make modifications and alterations to this statement as may be required from time to time. MNCL or any of its associates / group companies, officers, employee's and directors shall not be in any way responsible for any loss or damage that may arise to any person from any inadvertent error in the information contained in this report. MNCL is committed to providing independent and transparent recommendation to its clients. Neither MNCL nor any of its associates, group companies, directors, employees, agents or representatives shall be liable for any damages whether direct, indirect, special or consequential including loss of revenue or lost profits that may arise from or in connection with the use of the information. Past performance is not necessarily a guide to future performance. The disclosures of interest statements incorporated in this report are provided solely to enhance the transparency and should not be treated as endorsement of the views expressed in the report. The information provided in these reports remains, unless otherwise stated, the copyright of MNCL. All layout, design, original artwork, concepts and other Intellectual Properties, remains the property and copyright of MNCL and may not be used in any form or for any purpose whatsoever by any party without the express written permission of the copyright holders.

MNCL shall not be liable for any delay or any other interruption which may occur in presenting the data due to any reason including network (Internet) reasons or snags in the system, break down of the system or any other equipment, server breakdown, maintenance shutdown, breakdown of communication services or inability of the MNCL to present the data. In no event shall MNCL be liable for any damages, including without limitation direct or indirect, special, incidental, or consequential damages, losses or expenses arising in connection with the data presented by the MNCL through this report.

MNCL and its associates, officer, directors, and employees, research analyst (including relatives) worldwide may from time to time, have long or short positions in, and buy or sell the Securities, mentioned herein or be engaged in any other transaction involving such Securities and earn brokerage or other compensation or act as a market maker in the financial instruments of the subject company/company(ies) discussed herein or act as advisor or lender/borrower to such company(ies) or have other potential/material conflict of interest with respect to any recommendation and related information and opinions at the time of publication of research report or at the time of public appearance. MNCL may have proprietary long/short position in the above mentioned scrip(s) and therefore should be considered as interested. The views provided herein are general in nature and do not consider risk appetite or investment objective of any particular investor; readers are requested to take independent professional advice before investing. This should not be construed as invitation or solicitation to do business with MNCL. Registration granted by SEBI and certification from NISM in no way guarantee performance of MNCL or provide any assurance of returns to investors and clients.
