Aakaar Medical Technologies

nuvama professional clients group

We recently hosted the management of Aakaar Medical Technologies (AAKAAR). AAKAAR is an integrated medical aesthetics platform, founded as a proprietary business in 1999 and incorporated in 2013. It operates one of India's broadest aesthetics portfolios with a hybrid mix of in-licensed global injectables/devices and high-margin own-brand consumables. Its core focus areas include medical aesthetics (fillers, toxins, threads, regenerative solutions), skincare/homecare, and select medical dermatology. Led by Managing Director Mr. Dilip Meswani, the company markets its own brands alongside imported aesthetic brands from Korea, Spain, Italy, and Austria, enabling a competitive and diversified product mix. With an asset-light, margin-accretive model, a 129-member medical representative team, and access to over 14,000 practitioners, AAKAAR continues to scale across India's underpenetrated aesthetics market. As a long-term vision, the management aspires to become India's No.1 aesthetics company with revenue potential of ~INR 1,000 crore in an Indian aesthetics market of ~INR 2,500 crore (expected to double by 2030). The stock is not rated.

CMP: INR70
Rating: Not Rated
Date: December 6, 2025

Bloomberg:	AAKAAR:IN
52-week range (INR):	62 / 105
M-cap (INR cr):	107
Promoter holding (%)	67.01

Key takeaways from the management interaction:

- AAKAAR's portfolio includes peels, medi-facials, serums, scalp peels, moisturisers, masks, acne-care, post-procedure products, and devices such as Q-Switch lasers, the Synergy+ HydraFacial platform, and the Regenera Activa AMT system. All products are prescription-based, medical-grade, steroid-free, and supplied to dermatologists, plastic surgeons, and maxillofacial surgeons.
- The Indian aesthetics market is currently valued at US$284 mn (2024) and is expected to double by 2030. AAKAAR clocked ~49% revenue CAGR during FY21–FY25, significantly outperforming the industry's 9–10% growth.
- The company has deep reach, covering ~8,000 dermatologists (from a pool of ~17,600, including most of the 8,000–9,000 aesthetic dermatologists), ~2,000 aesthetic plastic surgeons (out of ~6,000), and ~600 maxillofacial specialists (from a larger base of ~20,000 experts). It served 5,000–6,000 clients in FY25.
- In products, AAKAAR markets 47 in-house SKUs (~INR 20 crore; 37% of product revenue) and distributes 70 imported SKUs (~INR 33 crore; 63%), taking FY25 product revenue to ~INR 53 crore (~86% of total revenue).
- The device business generated ~INR9 crore in FY25 (~14% of revenue), with a 39:61 mix of own brands and imports. Several devices generate recurring revenue.
- Gross margins stand at ~60% for imported products, ~70% for own products, and a blended margin of ~57–60%.
- Yellow Peel remains AAKAAR's flagship product, where it holds market leadership; management expects INR 8–10 crore revenue from this SKU alone in FY26.
- Financial performance over FY23–25 was strong, with revenue/EBITDA/PAT CAGR of 37%/66%/67%, and EBITDA margin expanding from 10.8% to 15.8%. H1 FY26 was soft, with a 10% YoY revenue decline and temporary EBITDA/PAT losses due to seasonality and tighter credit norms; historically H2 accounts for a larger share of annual earnings.
- Key growth drivers for FY26–27 include launches of:
  (a) Exovia, a high-end exosome/regenerative division (Italy-based VM partner)
  (b) USFDA-approved dermal fillers (Austria) and toxin (Hugel, Korea) competing directly with Botox
  (c) Patented facial lifting threads and Polynucleotides
  (d) Hair transplant device & Tubelight GFC for hair restoration
  (e) A psoriasis treatment product in collaboration with Invex
- Management has guided for 30%+ revenue CAGR over the next few years, driven by margin expansion and deeper penetration in the fast-growing aesthetics market. It also aims to reduce receivables in FY26 and improve its working capital cycle.

Valuation and view

Based on the management's guidance, the stock trades at a P/E of 11x and 8x FY26/FY27 EPS. The stock is not rated.

All Time Plastics

nuvama professional clients group

We recently hosted the management of All Time Plastics (ALLTIME), which is engaged in the design and manufacture of injection-moulded plastic consumer ware products. It exports to 29 countries and is India's second-largest exporter of plastic consumer ware. It primarily caters to B2B white-label clients while offering its own 'All Time Branded Products' to B2C customers. In FY25, it offered 1,848 SKUs across eight product categories. It operates three highly automated and strategically located plants in Silvassa, Daman, and Khattalwada (Gujarat).

Capacity stood at 37,000mt in Q2FY26, with expansions taking this to 46,500mt/52,500mt by FY26/FY27. It also operates a bamboo pilot plant in Guwahati and is setting up a commercial facility. Promoters Mr Kailesh Shah (CMD), Mr Bhupesh Shah (Whole-Time Director), and Mr Nilesh Shah (Whole-Time Director & MD) collectively bring over four decades of industry experience. The stock is not rated.

CMP: INR281
Rating: Not Rated
Date: December 6, 2025

Bloomberg:	ALLTIME
52-week range (INR):	257 / 335
M-cap (INR cr):	1,839
Promoter holding (%)	70.14

Key takeaways from the management interaction:

- With 37,000mt capacity (September) and visibility to reach 46,500mt/52,500mt by FY26/ FY27, ALLTIME is set to benefit from growing global demand and India's rising relevance from the China+1 shift.
- Installation of all-electric moulding machines at the Khattalwada plant will boost productivity and lower power costs. The plant has been audited and certified and has started shipping to IKEA, Target, and other customers.
- It derives 75%/25% of its revenue from exports/domestic markets, with the US contributing 11%.
- ALLTIME has long-standing relationships with its top customers like IKEA (28 years), ASDA (18 years), and Tesco (15 years).
- Its competitive strengths lie in it being highly reliable, compliant with high-quality practises, having strong product designs and innovation, and an in-house toolroom that shortens lead times and enhances product development.
- It is meaningfully scaling its next growth vertical in bamboo houseware, which offers a better margin. Pilot products have received approvals, and a trial order for a marquee global customer will be shipped from its Guwahati pilot facility in Q3FY26. The management guided at adding a leased premises, at a capex of INR10cr, to ramp up capacity.
- Bamboo products offer higher realisations, require no moulds, have superior asset turns, and deliver 4–5% higher RoCE, enabling a business-level RoCE of 25%. However, scaling will take time.
- Sales CAGR of ~20% over the next five years is achievable, with asset turnover of 2.1x, working capital of 20%, and mould costs typically between 5% and 7%. Revenue growth over FY25–28 will be driven by higher volumes from capacity expansions and improved utilisation as facilities stabilise by FY28.
- Capacity utilisation is expected to rise to 85% by FY27–28, aided by demand from Europe, the UK, the US, and Australia.
- ALLTIME is targeting a 10–12% normalised EBITDA margin and ~18% RoCE over the medium term, led by SKU innovation, deeper client penetration, and diversification across plastic and bamboo homeware.
- The management aims to raise its domestic revenue share to 25% from 17% by expanding product categories and then increasing the depth of its distribution. As new capacities ramp up, fixed cost absorption should improve, aiding margin expansion and better return ratios.
- Its fully integrated facilities and strategic locations provide a competitive edge in large-scale, cost-efficient manufacturing.

Valuation and view

With its capacity expansion plans, diversification into bamboo ware, and a broadening global and domestic customer base, ALLTIME is positioned for multi-year growth. The stock trades at 48x P/E on a trailing 12-month basis. The stock is not rated.

Alpex Solar

nuvama professional clients group

We recently hosted the management of Alpex Solar. Incorporated in 1993, ALPEXSOL has emerged as one of India's leading solar manufacturers, positioning itself among the top white-label producers. It is ranked in the top 10 manufacturers of specialised high-power photovoltaic modules. With more than 18 years of experience in solar manufacturing, it has built a strong domestic footprint, deriving ~98% of its revenue from India by serving marquee clients such as Hindustan Aeronautics, Shakti Pumps (India), NTPC, and Power Grid Corporation of India.

A major scale-up is underway to evolve into a fully integrated solar cell and module manufacturer. It is on schedule to commission 2.4GW of module capacity in FY26, with broader expansion progressing towards 3.6GW by FY27. It is also setting up a 2.2GW solar cell facility, which will be commissioned in phases, to aid backward integration and enhance overall manufacturing efficiency. It has installed over 21,000 water pumps across India, underscoring its execution capabilities and long-standing presence in renewable energy solutions. It reported a revenue/EBITDA margin/PAT of INR780cr/16%/INR83cr in FY25. The stock is not rated.

Key takeaways from the management interaction:

- The management reiterated its annual growth guidance of ~2x each in FY26/FY27, aided by improving execution.
- The order book stands ~INR2,000cr, comprising INR600cr/INR250cr of EPC/solar pumps, and the balance from modules, including a notable INR350cr project for Coal India.
- Pricing trends are softening as demand scales and tech upgrades enhance efficiency. The management does not foresee any significant overcapacity in the cell industry.
- Around 75% of the expansion is complete. G12R (TOPCon) cell production is expected to commence by March 2026, with a 1.4GW/800MW contribution for eight to nine months/four to five months in FY27. Once completed, the INR136cr project will take module/cell capacity to 3.6GW/2.2GW by FY27.
- Likely utilisation of the cell line in FY27 is ~1GW, translating into a revenue of ~INR1,000cr at 35–36% EBITDA margin. Once the ramp-up is complete, the line is expected to generate a revenue of ~INR2,000cr, with most output used for captive purposes.
- The management reiterated its high-teens PAT margin guidance for FY28.
- Policy momentum is supportive, with new demand-side schemes expected. The KUSUM programme, for instance, is likely to see its initial 30GW allocation doubled to 60GW, materially benefiting domestic manufacturers.
- ALMM List 2, effective June 2026, mandates local sourcing of solar cells, creating a strong structural tailwind for the company's backward integration and utilisation ramp-up.
- The management plans to introduce a dividend policy in the medium term, reflecting strengthening cash generation.
- It is not exploring wafer, ingot, or hydrogen investments at present but may do so only with supportive government schemes such as production-linked incentives.

Valuation and view

At the CMP of INR959, the stock trades at 16x P/E and 10.5x EV/EBITDA on a TTM basis. The stock is not rated.

Anant Raj

nuvama professional clients group

We recently hosted the management of Anant Raj (ARCP), a diversified real estate and digital infrastructure company. With a 312-acre paid land bank (including ~101/167 acres in Delhi/ Gurugram), it boasts one of the deepest launch pipelines in the NCR. It simultaneously runs a large-scale real estate development and a growing data centre and Cloud business, with data centre capex of ~INR50cr/MW and total capital employed of INR700cr (H1FY26).
In H1FY26, ARCP invested INR187cr in data centres, commissioned a 28MW facility, advanced three residential projects, and launched its in-house Cloud platform — Ashok Cloud. With a zero-debt Balance Sheet and strong demand visibility, it targets ~INR1,200cr in revenue from data centres at full occupancy — leveraging both co-location (~INR90lk/MW/month) and Cloud (~INR12cr/MW/month). The stock is not rated.

CMP: INR499
Rating: Not rated
Date: December 6, 2025

Bloomberg:	ARCP.IN
52-week range (INR):	366/948
M-cap (INR cr):	20,556
Promoter holding (%)	57.35

Key takeaways from the management interaction:

- ARCP has a 28MW operational data centre capacity in Manesar and Panchkula as of August. Launched in October 2024, Ashok Cloud began its B2B rollout shortly. The expansion roadmap is on track with 28MW/63MW/117MW/307MW in FY26/FY27/FY28/2032.
- A MoU was recently signed with the Andhra Pradesh government for data centre facilities and an IT park. Its Cloud capabilities in platform design, build, and operations are being scaled up with the help of Orange Business Services.
- It handed over an 8MW colocation capacity in H1FY26, with a 0.5MW Cloud generating revenue. Revenue mix is split 75:25 between colocation and government. In terms of revenue from Cloud, it is equally balanced between government and private players. It has added clients beyond RailTel Corporation of India, Telecommunications Consultants India, and CAC India Pvt.
- Cloud allocation is rising in the 28MW/63MW phase (4MW/14MW Cloud and 24MW/49MW colocation). The management expects higher Cloud conversion once its entire colocation infrastructure is built.
- Work has begun at Ashok Towers (Sector 63A, Gurugram) and the 7lk sq. ft. mixed-use project (commercial, serviced apartments, and a hotel) in Delhi, with Phase I completion targeted by FY28. Phase IV of Anant Raj Estate (~5lk sq. ft. spread over six acres) will be launched in Q3FY26. A third luxury group housing project is planned for FY27.
- Data centre expansion is strong, with Panchkula/Manesar capacity scaled to 7MW/21MW. Development is underway on 35MW Cloud capacity. Construction has begun on its data centre at Rai (Sonipat), with a Phase I capacity of 20MW and a total planned IT load of 200MW.
- The management reiterated that FY26 is an inflexion year for ARCP, with predictable real estate growth and data centre and Cloud emerging as scalable and high-margin engines, aided by strong liquidity and low leverage.
- Launch sequencing has been calibrated, with the introduction of Estate Floors and Group Housing Project I in FY26. Approvals for Group Housing Project II are expected in Q4FY26, with rollout targeted in H1FY27. Phase I of the 7lk sq. ft. Bel-La Monde mixed-use hospitality project in South Delhi is headed for completion in FY28.
- The management expects the Centre's proposed tax incentives for Cloud and colocation to be materially beneficial once notified.
- Capex mix stands at 75:25 between colocation and Cloud, with Cloud's share likely to rise from FY27 as internal cash flows strengthen.

Valuation and view

At the CMP of INR522, the stock trades at a P/E of 38.1x and an EV/EBITDA of 29.9x on a TTM basis. The stock is not rated.

Aprameya Engineering

nuvama
professional clients group

We recently hosted the management of Aprameya Engineering (APRAMEYA). Founded in 2003 by Mr Chetan Joshi and Mr Saurabh Bhatt, APRAMEYA has evolved from a medical equipment distributor into a comprehensive healthcare solutions provider. After two decades of building strong relationships across the healthcare ecosystem, it ventured into turnkey projects in 2020. Recently, it forayed into the manufacture of medical devices through its subsidiary Aprameya Medtech Pvt. It has established itself as a trusted partner capable of delivering integrated healthcare infrastructure solutions to private and government healthcare institutions. It posted a revenue/EBITDA/PAT CAGR of 32%/61%/73% over FY23–25, aided by a margin expansion to 18% in FY25. The management is targeting a revenue CAGR of 25-30% on a consolidated basis over the next three years. The stock is not rated.

CMP: INR300
Rating: Not Rated
Date: December 06, 2025

Bloomberg:	APRAMEYA:IN
52-week range (INR):	72 / 360
M-cap (INR cr):	657
Promoter holding (%)	73.53

Key takeaways from the management interaction:

- APRAMEYA's turnkey projects are set for strong growth, aided by a large healthcare opportunity in India.
- The management is targeting a revenue CAGR of 20-25% over FY25-28E from turnkey projects on the back of expansion into new states (Odisha, Jharkhand, Madhya Pradesh, Uttar Pradesh, North-East), increased contribution from private hospitals and diagnostic networks, order book target of INR300-350cr (active bid pipeline stands at INR200cr).
- The turnkey business follows a cycle, seeding/tender receipt/tender award/ execution in the first/second/third/fourth quarter, resulting in a heavier performance in the second half of the fiscal.
- It forayed into medtech via subsidiary, Aprameya Medtech, launching HystroPress, a fluid management system for hysteroscopy in IVF and gynaecology. The Indian market is estimated at 1,200-1,400 units of hysteroscopy. APRAMEYA aims to sell 200 units in the first year. The product has been approved and is under trials at leading IVF clinics.
- The medtech division will begin with select states and scale across India within a year. APRAMEYA plans to launch three/five products by FY26/FY27, targeting medtech revenue of INR12cr/INR25cr/INR50cr/INR100cr in FY27/FY28/FY29/FY30.
- The medtech division will have dedicated R&D team and will focus on import substitution products.
- It aims to source 65-70% of turnkey equipment internally within three years from nil at present, which can lift gross margin to ~40% from ~24%, as equipment accounts for ~80% of turnkey costs.
- Most turnkey revenue accrues from government contracts while initial medtech sales will be private. Government payments, though reliable, have a long cycle of around six months. To reduce state concentration, the management plans to expand to 10-12 contributing states by FY28.
- As an extension of turnkey business, the company is focused on recurring revenues from Comprehensive Annual Maintenance Contracts (CAMC), which is expected to contribute meaningful revenue from FY26 onwards.
- It expects to collect ~80% of H1FY26 receivables by January-February 2026 and guides at a 25–30% revenue CAGR over the next three years, with margin expansion.

Valuation and view

Based on management's guidance, the stock trades at a P/E of 23x and 16x FY26/FY27 EPS. The stock is not rated.

Atlanta Electricals

nuvama professional clients group

We recently hosted the management of Atlanta Electricals (ATLANTAE), one of India's leading manufacturers of automobile, power, and inverter-duty transformers by production volume. Its diversified product range includes power, inverter-duty, furnace, generator, and special-duty transformers, which cater to a wide spectrum of industrial and utility clients. It is one of the few local manufacturers capable of producing transformers up to 200MVA/220kV. Following the commissioning of its Vadod (Gujarat) unit and the acquisition of BTW-Atlanta Transformers India Pvt (BTW), it has enhanced its manufacturing capabilities to produce transformers with capacities of up to 500MVA and voltage ratings of 765kV. The stock is not rated.

CMP: INR871
Rating: Not Rated
Date: December 6, 2025

Bloomberg:	ATLANTAE:IN
52-week range (INR):	781 / 1,098
M-cap (INR cr):	6,700
Promoter holding (%)	87.27

Key takeaways from the management interaction:

- The power equipment and transformer industry is on a strong long-term growth trajectory, aided by reforms like India's National Electricity Plan (NEP), Green Energy Corridor, Revamped Distribution Sector Scheme (RDSS), and a planned INR9.6lk cr transmission capex until 2032, ensuring multi-year demand visibility for transformers across voltage classes.
- Additional demand is emerging from data centres, green hydrogen, industrial electrification, and export substitution opportunities, strengthening the medium-term prospects for domestic manufacturers.
- Replacement demand is also strong on the transmission side as utilities increasingly upgrade older transformers every ~25 years to benefit from better technology and lower technical losses.
- It has emerged as a scale player with 63,000MVA capacity, enabling participation from 33kV distribution transformers all the way to 765kV extra-high-voltage units.
- FY26 marks a pivotal scale-up year. The greenfield plant and the acquired BTW facility have begun contributing meaningfully, with the BTW unit alone offering an annual revenue potential of INR600–700cr once it is fully ramped up.
- The new plant, which can produce 440kV class transformers, is operational but underutilised. It is designed for 400kV/500MVA but is running at 220kV/166MVA levels. This unit is expected to reach full utilisation over the next two years.
- By FY26 end, it expects to receive full approvals for 440kV class transformers and is in advanced discussions to enter a technology partnership for 765kV design and production. Post this, prototype development for 765kV can begin.
- Margin is stable at 17–18% blended EBITDA, with higher voltage classes offering superior profitability due to limited competition. Margin expansion is expected as 400kV /765kV volumes scale up by FY28.
- As of September 30, the order book stands at INR2,069cr, providing strong execution visibility. Order book mix is split between 60% in 220kV and 40% in 66kV and 132kV.

Valuation and view

Consolidated revenue/EBITDA/PAT grew 17%/33%/11% YoY to INR317cr/INR56cr/INR30cr in Q2FY26. Revenue/EBITDA/PAT stood at INR632cr/INR105cr/INR61cr in H1FY26. At the CMP of INR871, the stock trades at a P/E ratio of 54.9x and an EV/EBITDA of 33.3x on a TTM basis. The stock is not rated.

Awfis Space Solutions

nuvama professional clients group

We recently hosted the management of Awfis Space Solutions. AWFIS is a pan Indian flexible workspace solutions company, operating in rental services/design and build services (D&B) which contribute 82%/18% to total revenue. In the rental segment, it has an operational inventory of 170,000 seats spread across 237 centres in 18 cities. It caters to above 3,400 clients across segments, with 61%/23%/16% seats being occupied by enterprises/SMEs/ startups and freelancers. Around 74% of its operational inventory is occupied, with an average monthly seat rate of ~INR9,000. In its D&B segment, it provides fitout services to external clients in the IT, BFSI, and telecom sectors. It has a strong demand and order book.

Revenue grew a strong 28% YoY to INR702cr in H1FY26, led by a 42% growth in rental services, even as D&B saw a 5% decline. Growth in the rental services was led by: i) a 33% YoY growth in operational inventory, and ii) a 100bp rise in occupancy. EBITDA (excluding Ind AS 116) grew 35% YoY to INR93cr, with margin expanding by 71bp to 13.3% on strong occupancy and operating leverage benefits. APAT scaled up to INR26cr from INR17cr YoY. **We expect it to comfortably reach 170,000 operational seats by FY26-end. Thereon, we see it adding 30,000–40,000 seats annually to capture the growing demand and expand its market share. In D&B, it will deliver sustainable growth on market share gains. We expect a revenue/EBITDA/PAT CAGR of 36.7%/34.2%/102.9% over FY25–27. We maintain 'BUY' with a SoTP-based TP of INR972.**

CMP: INR688
Rating: BUY
Target price: INR1,013
Upside: 47%
Date: December 6, 2024

Bloomberg:	AWFIS.IN
52-week range (INR):	371/945
M-cap (INR cr):	5,361
Promoter holding (%)	28.2

Key takeaways from the management interaction:

- AWFIS launched Awfis Transform, a wholly owned subsidiary to scale its D&B business, enhance transparency in capital allocation, and expand its offerings beyond workplaces into retail, hospitality, and institutional segments.
- Demand momentum is strong with more than 15,000/30,000 seats signed in Q2/H1FY26 versus 25,000 in H1. Large corporates and MNCs constitute 61% of occupied seats. Multi-centre usage has risen to 44%, with healthy client tenures at 36 months.
- AWFIS is scaling its premium and Grade A supply; deepening its technology, design, and sustainability capabilities; and strengthening its enterprise focus, with premiumisation accelerating (70%/100% of new supply is from Grade A+/Grade A buildings) and the managed aggregation (MA) mix heading towards its 65% target despite a temporary moderation ~61%. Premium centres (Gold and Elite; 26) deliver a higher margin of 2–5%.
- Occupancy rose ~2% YoY in H1FY26, with seat sales expected to convert into occupancy in H2. Revenue from rental services grew 36% YoY on a 33% increase in inventory (147,000 seats) and a 1pp rise in occupancy to 74%. MA/straight lease (SL) breakeven stands at 30–35%/55–60%. New centres reach ~80% occupancy in nine to 12 months. Contract assets stood at INR77cr due to work in progress and unbilled D&B revenue.
- Despite a timing impact, D&B revenue grew ~20% QoQ in Q2FY26. Now housed under Awfis Transform, the business gains independence, scalability, and clearer financial visibility. Though margin was lower, it has low working capital intensity, minimal depreciation, and strong RoCE while aiding its core workspace offering.
- Around 28,000 seats are planned for H2FY26, largely Q4-led and similar to FY25. Capex per sq. ft. stood at INR1,750/INR2,000/INR2,250 for Flagship/Gold/Elite centres. It revised its FY26 capex guidance to ~INR220cr, with H2 additions maintaining the 65:35 MA and SL mix.

Valuation and view

Led by: i) 23% CAGR in seat inventory, ii) an annual 6% growth in the average seat rate, iii) ~73% occupancy, and iv) a 58% revenue CAGR in D&B on strong demand, we expect a 38% revenue CAGR over FY25–27. We see it clocking 34% EBITDA CAGR over FY25–27 on strong revenue growth, operating leverage benefits, and a better product mix. We are bullish on AWFIS' long-term growth prospects due to: i) the favourable gap in demand and supply, ii) its strong inventory additions, iii) improving occupancy, iv) capital-light growth, and v) robust Balance Sheet. At the CMP, stock trades at a FY27E P/E of 12.5x. Maintain **'BUY'**.

Bharat Parenterals

nuvama professional clients group

We recently hosted the management of Bharat Parenterals, a third-generation pharmaceutical manufacturer with more than 33 years of expertise. BHP derives revenue from three core areas: i) supplies of finished dosages to government institutions and exports to less regulated markets (under BHP); ii) sale of branded hospital-focused formulations through its wholly owned subsidiary Varenyam Healthcare Pvt; and iii) licencing income from complex formulations developed by Innoxel Lifesciences, its 56% subsidiary, targeting the US and EU markets.
A fourth vertical is being added through Varenyam Bio Lifesciences Pvt. Here, it is constructing a greenfield facility for emerging markets, with commercial production expected in 2027. These four businesses position BHP to potentially achieve a revenue of INR1,000cr/up to INR2,000cr by FY28/FY31 as against INR340cr in FY25. Sale of complex products and rising exports will drive an expansion in EBITDA margin from 8% in H1FY26. The stock is not rated.

CMP: INR1095
Rating: Not Rated
Date: December 6, 2025

Bloomberg:	BHP:IN
52-week range (INR):	802 / 1,790
M-cap (INR cr):	755
Promoter holding (%)	67.19

Key takeaways from the management interaction:

- Innoxel Lifesciences (Innoxel) has cleared major regulatory milestones. Its INR250cr Vadodara facility received USFDA approval in July and EU-GMP certification (through Belgium) in November. With this, it is ready to launch CDMO/CMO operations.
- Commercial revenue is expected to accrue from Q1FY27. EBITDA breakeven is targeted by FY26 end on the back of licencing income.
- In FY27, Innoxel will generate a licencing revenue of ~INR65cr, up from ~INR50cr/INR28cr in FY26/FY25. It will also garner revenue from commercial CMO contracts (20 signed and 19 in the pipeline) and profit-sharing on partnered products.
- BHP is expanding its pipeline to 40 complex products, which is expected to contribute INR100cr within 18–24 months. It expects a medium-term revenue mix of ~20%/~40%/~40% from licencing/commercial CMO contracts/profit sharing on partnered products.
- Varenyam Healthcare Pvt (VH), BHP's wholly owned subsidiary, is scaling its presence in domestic critical care. Already the fifth-largest player in the Indian anaesthesia market, it is expanding into critical care and pain management using R&D from BHP and Innoxel.
- Operating through four divisions and aided by a 180-member field force, VH will add another anaesthesia division shortly.
- VH reported a revenue of INR52cr in FY25 and expects to achieve INR60cr in FY26. It is targeting a revenue of INR100cr per division over the next four to five years.
- Varenyam Bio Lifesciences Pvt (VBL) is developing a facility for complex injectables and oral liquids for emerging markets using Innoxel's complex ANDA and 505(b)(2) portfolio.
- VBL's INR130cr project (capex of INR30cr incurred in September) includes general and oncology blocks. Construction and installation should conclude by 2026 end, followed by qualification in H22026 and commercial production in 2027.
- Peak revenue potential for VBL is estimated at INR400cr within four to five years of its launch.
- The focus of BHP's standalone business is on RoW exports and institutional supplies to the central government (anti-TB, anti-HIV, and anti-malarial drugs).
- Expansion in its export footprint and shift to higher value products is aiding margin.
- The management maintained its FY26 standalone revenue growth guidance of 12–14%, with EBITDA margin expected to expand to 15-17% from 8% in H1FY26 on better utilisation and a stronger institutional mix.
- In H1FY26, consolidated revenue grew 10% YoY to INR181cr. EBITDA returned to the black at INR14.6cr from an operating loss of INR3.2cr. Net loss shrank to INR9.5cr from INR26.3cr.
- Borrowings declined to INR131cr in September from INR180cr in March. A much stronger H2FY26 is expected, aided by margin expansion and steady licencing income from Innoxel.

Valuation and view

The stock is trading at an EV/EBITDA (TTM) of 42x. Based on management's guidance for FY26/FY27, the stock is trading at EV/EBITDA at 24x/12x. The stock is not rated.

Chandan Healthcare

nuvama professional clients group

We recently hosted the management of Chandan Healthcare. Incorporated in 2003, CHANDAN is a North India focused, integrated diagnostics and pharmacy services provider with over two decades of industry experience. Under the leadership of Mr Amar Singh (Chairman & MD), it offers National Accreditation Board for Testing and Calibration Laboratories (NABL) and National Accreditation Board for Hospitals & Healthcare Providers (NABH) accredited pathology and radiology services via a fully owned network of 44 diagnostic centres and over 400 collection centres across more than 35 cities.

Its diversified model spans B2C retail diagnostics, B2B institutional partnerships, B2G government PPP contracts, and a strong pharmacy footprint, enabling high-quality, consistent service delivery and a deep regional presence. It recently launched its initial public offering of ~INR107.2cr, with a fresh issue/OFS of ~INR70.7cr/~INR36.5cr, to help fund its expansion plans. The stock is not rated.

CMP: INR291
Rating: Not Rated
Date: December 6, 2025

Bloomberg:	CHANDAN:IN
52-week range (INR):	140 / 358
M-cap (INR cr):	701
Promoter holding (%)	49.47

Key takeaways from the management interaction:

- Led by a seasoned senior team of 45 members, with an average experience of ~22 years, including two doctors.
- Entered a B2B partnership with Jeena Sikho Lifecare (JSLL) for diagnostic testing, strengthening institutional business.
- Under the JSLL agreement, CHANDAN secures a 5-year contract covering 50 centres and 150+ clinics, expanding to 350 locations over three years; JSLL patients receive 30% discount, and CHANDAN shares 20% of net realisation while still maintaining ~40% operating margin due to lower utility and marketing costs.
- Aggressive expansion to over 100 labs and ~1,000 franchises over the next three years; current network includes 44 labs and 400+ collection centres (~75% government-linked). ~99% of tests are processed at the central lab.
- Typically, a comprehensive lab (~8,000 sq. ft.) requires INR7-10cr and basic lab (3,000–4,000 sq. ft.) needs ~INR50 lakh with setup cycle ~12 months.
- New centres begin with 20–22 staff and typically scale to ~40 employees as volumes ramp up.
- New labs initially start with pathology services. Radiology is added once the centre gains traction, significantly enhancing its revenue potential.
- To drive patient acquisition, it distributes ~2lk new Chandan Care cards every month and offers a free first check-up.
- Pharmacy business, though fetch only ~6%/4% EBITDA/PAT margin, it acts as sourcing points for diagnostic and pathology footfalls.
- Revenue contribution is split 75:25 between institutional clients and the government. The institutional business is more profitable with faster payment cycles (~30 days) while government payments take four to six months.
- The management highlighted that diagnostics is largely unorganised, with a total market size of ~INR1,30,000cr, of which only ~INR15,000cr is organised.
- Group entity Chandan Hospital (not part of listed CHANDAN) operates three hospitals and contributes diagnostic volumes; a fourth 250-bed hospital in Gorakhpur will further support growth.
- Management plans a separate IPO for the hospital business in FY27–28.
- It is guiding at ~25% revenue growth in the coming years, with stable margin.

Valuation and view

Based on management's guidance, the stock trades at a P/E of 24x and 19x FY26/FY27 EPS. The stock is not rated.

Connplex Cinemas

nuvama professional clients group

We recently hosted the management of Connplex Cinemas (CONNPLEX), an entertainment company transforming India's cinema viewing experience through premium recliner seating, advanced sound systems, and high-definition projection technology. It develops and manages high-grade cinemas, distributes films, and scales its presence through an asset-light franchise model, enabling rapid expansion with minimal capex. The model diversifies revenue streams via ticket sales, advertising, film distribution, and food & beverage (F&B). Its national footprint comprises 31 cinemas, with 83 screens and 6,831 seats across nine states as of Q2FY26, with 17 screens added in H1FY26. Promoters Mr Anish Patel (MD) and Mr Rahul Dhyani (Joint MD) bring over six years of experience in the entertainment sector, with a strong focus on innovation and expansion. The stock is not rated.

CMP: INR247
Rating: Not rated
Date: December 6, 2025

Bloomberg:	CONNPLEX
52-week range (INR):	177 / 267
M-cap (INR cr):	472
Promoter holding (%)	70.07

Key takeaways from the management interaction:

- CONNPLEX's new-age cinema format uses a compact 7,000 sq. ft. layout, enabling lower rentals (INR4lk) and capex (INR10–12cr) and monthly opex of INR45lk, operating at a fraction of multiplex economics.
- Its 70–75 seat auditoriums are tailored to India's real occupancy patterns, enabling better utilisation and faster breakeven compared to traditional multiplex formats.
- The focus is on underserved regions, where large competitors have limited presence. It is targeting Tier II, III, and IV markets, with selective expansion into metro and Tier I cities.
- Its strategy of identifying high-demand and low-supply pockets, and deploying a highly cost-efficient cinema model, has enabled strong traction and meaningful share gains in emerging and semi-urban catchments.
- Revenue growth over FY25–27 will be driven by rapid screen additions, with ~150 new screens planned in H2FY26–FY27, boosting scale, strengthening brand visibility, and enhancing revenue durability under its franchise-led strategy.
- A streamlined franchise set-up (capex: INR2–3cr) ensures quick launches, consistent quality, and attractive franchise economics, with 30% RoI and a 36–40 month payback.
- The franchise rollout process includes site identification, leasing/subleasing arrangements, architectural design, licensing, and fit-out supervision-ensuring uniformity and low failure rates. A dedicated 100-member team (15–17 in sales) manages screen onboarding.
- It follows an 80:20 revenue-sharing model, wherein 80% of income accrues to the franchisee and 20% is earned by CONNPLEX as royalty from ticketing, F&B, and advertising revenue.
- Connplex also earns cinema-making revenue, as franchisees pay a project fee of ~INR2.1 crore for fit-out and rollout. This is booked as revenue with 25–30% margins. Additionally, the VPF (Virtual Print Fee) is fully retained by Connplex, with 80–100% margins.
- Currently, income is evenly split between ticketing and cinema-making, though royalty share will rise as the screen base grows. Once the company crosses ~200 screens, >70% of revenue is expected to come from royalty streams.
- In H1FY26, it welcomed 12.16lk viewers (69% YoY), with occupancy rising to 32% from 30%.
- Average ticket price/spends per head/advertising revenue rose 6%/16%/107% YoY to INR243/ INR94/INR1.12cr.
- Revenue/EBITDA/PAT surged by 57%/39%/36% YoY to INR64cr/INR17.9cr/INR13cr in H1FY26, aided by strong footfalls, F&B traction, space rentals, private events, and advertising income.
- The management has guided at a FY26/FY27 revenue of INR140cr/INR195cr and PAT of INR30–31cr/INR40–45cr.

Valuation and view

CONNPLEX is scaling rapidly through its asset-light franchise model, aided by rising footfalls, robust content performance, and accelerating screen additions. With strong operating leverage, high-margin revenue streams, and deep penetration into underserved markets, it is poised for multi-year growth in revenue and profitability. The stock trades at 21x P/E on a trailing 12-month basis. The stock is not rated.

CWD

nuvama professional clients group

We recently hosted the management of CWD, an IoT-driven electronics company specialising in sound boxes, smart metering communication modules, and weather monitoring systems. It offers fully integrated hardware–software solutions to fintechs, banks, utilities, and enterprises. It has strong OEM partnerships with PhonePe, CyanConnode, Jio, and several leading banks. With demand accelerating across connected devices, it is scaling its electronic manufacturing services capacity to aid both domestic and international deployments. The stock is not rated.

CMP: INR1,900
Rating: Not Rated
Date: December 6, 2025

Bloomberg:	CWD:IN
52-week range (INR):	673 / 1,976
M-cap (INR cr):	920
Promoter holding (%)	60.93

Key takeaways from the management interaction:

- CWD has emerged as a key Make in India enabler in the soundbox ecosystem, with the deployment of ~2.5cr devices and the expected installation of an additional ~50lk units annually. With most sound boxes imported from China, it is best positioned to capture the large domestic substitution opportunity.
- It has rapidly scaled its soundbox operations, aided by a confirmed order book of INR172cr and a 3.7x increase in its manufacturing capacity to 2.5–3lk units per month at its newly integrated facility.
- The management highlighted that sound boxes typically have a 24–30 month lifecycle, creating steady replacement demand from its installed merchant base. With the new facility now commissioned, it expects the soundbox vertical alone to generate INR18–19cr in monthly revenue in H2FY26 on a single shift basis.
- The company is actively exploring global opportunities in fast-digitising markets. It is in advanced discussions with leading MNCs to deploy its soundbox solutions and SaaS platform internationally, leveraging its proven execution capabilities and robust device–software stack.
- CWD has secured a 10lk unit order for communication network interface cards (NICs) from CyanConnode Pvt, valued ~INR45cr. With ~4.7cr smart metres installed in India versus a national target of 30cr, the market is significantly underpenetrated, offering a multi-year opportunity for CNIC deployments.
- CWD, via its consortium with Digismart Network, has secured an LoA under Goa's AMISP programme to deploy ~1 lakh smart prepaid meters under the DBFOOT model. The 10-year O&M commitment ensures stable recurring revenue and strengthens its AMI positioning.
- In the weather-monitoring segment, it has secured a 15,000-unit order from Jio for deployment across Uttar Pradesh. It has fully designed, engineered, and tested the devices, and expects additional tenders from Assam, Rajasthan, and Maharashtra as states scale climate-data infrastructure.
- Its manufacturing footprint has expanded to 55,000 sq. ft. from 15,000 sq. ft., resulting in a 3.7× jump in production capacity across sound boxes, NIC and CNIC, weather stations, and other IoT devices. The new facility houses high-speed SMT lines, in-house plastic moulding, and integrated assembly lines. The management said this capacity provides ample headroom for upcoming orders and will materially aid revenue acceleration in H2FY26.
- It posted a strong turnaround in H1FY26, with revenue rising to INR40cr from INR7cr (~6× increase YoY). EBITDA improved to INR7.4cr from INR0.01cr YoY. It delivered a PAT of INR4cr from a loss of INR1.83cr YoY, led by operating leverage and improved cost controls. The management expects direct sourcing from original equipment manufacturers to reduce input costs and boost margin. Based on the monthly run-rate of ~INR20cr, revenue can reach ~INR120cr in H2, implying ~INR160cr for FY26, with a PAT margin of 10–12%.

Valuation and view:

CWD is entering a strong hyper-growth phase, driven by solid execution, deep R&D capabilities, and rising demand from marquee clients. The company has robust order visibility across soundboxes, NIC, and weather systems. With the new facility ramping up and higher-margin CNIC deliveries, H2FY26 is expected to be materially stronger. At ~16x/11x FY27E/FY28E earnings, valuations remain attractive, though execution remains the key monitorable.

Digitide Solutions

nuvama professional clients group

We recently hosted the management of Digitide Solutions. Formed through the demerger of Quess Corp's global technology solutions segment, DIGITIDE is positioned as an AI-first digital transformation partner, delivering integrated IT, business process management (BPM), and digital services across India and key global markets. Built on strong capabilities in AI, data and analytics, tech and digital services, and BPM, it leverages a network of more than 30 delivery centres to aid clients across healthcare, fast-growth tech (FGT), retail, BFSI, automotive, e-commerce, telecom, manufacturing, and the public sector.
Its suite of platforms across insurance, customer experience, collections, human resource, payroll, talent acquisition, and finance reflect a commitment to intelligent, scalable, and future-ready solutions. With a dedicated AI Centre of Excellence and next-gen products such as insurance data hub, Pulse.ai, SmartPay, and SmartHR, DIGITIDE is structured to drive enterprise-wide transformation, following its separation from QUESS and focus on long-term sustainable growth. The stock is not rated.

CMP: INR131
Rating: Not Rated
Date: December 6, 2025

Bloomberg:	DIGITIDE:IN
52-week range (INR):	140 / 20
M-cap (INR cr):	2,154
Promoter holding (%)	57.00

Key takeaways from the management interaction:

- The management aims to triple revenue to USD1bn by FY31, with ~USD650mn/ USD200mn from organic/inorganic growth initiatives.
- It expects margin to expand by 200bp by FY31 over its FY25 baseline. In FY26, it sees margin improving from Q4, with a stronger exit run-rate into FY27.
- The firm has secured Tier I partnerships with Amazon Web Services (AWS) and Microsoft Azure, providing early access to innovation in AI and machine learning (ML). The organisation has completely adopted AI first across delivery, using AI to enhance productivity, solution quality, and cycle times.
- Around 50% of the current pipeline comprises AI-enabled deals, with AI embedded across hiring, delivery, and operations. The management highlighted growing client preference for AI-enhanced solutions across verticals.
- It benefits from a strong global presence across North America and Asia Pacific, aided by three delivery centres (India, Canada, and the Philippines) and eight business centres across multiple geographies. This footprint strengthens its ability to deliver localised solutions with global best practices.
- DIGITIDE maintains a strong position in BPM, with a two-decade operating track record, anchored by deep client relationships across BFSI, healthcare, manufacturing, and FGT. Its scale of ~55,000 associates enhances domain depth and client stickiness.
- The long-term roadmap reiterates its FY31 goal of ~3x revenue growth, outpacing industry growth by nearly 2x. Margin gains will be driven by efficiency, scale leverage, and a sharper AI-led delivery model.

Valuation and view

At the CMP of INR131, the stock trades at a P/E of 22x and an EV/EBITDA of 7.7x on a TTM basis. The stock is not rated.

Dynamic Cables

nuvama professional clients group

We recently hosted the management of Dynamic Cables. Part of the Mangal Group, DYCL is a prominent manufacturer of power cables and conductors, serving the local and export market for nearly four decades. It supplies conductors and cables (including low voltage, medium voltage and high voltage), power control instrumentation, and signalling cables such as aerial bunched cables and railway signalling cables. It operates three manufacturing units, two in Jaipur and one in Reengus (Rajasthan). Its diverse client base comprises government utilities, EPC contractors, industrial clients, and exports. It holds ISO 9001:2015, 14001:2015, and 45001:2018 certifications, and its products undergo testing at accredited laboratories such as the Central Power Research Institute (CPRI) and Electrical Research and Development Association (ERDA). Over the past five years, it has demonstrated a 23% revenue CAGR in cables, 27% EBITDA, and 36% PAT, with strong return ratios. It has an order book of INR721cr as of H1FY26, with order execution timelines of six to nine months. The stock is not rated.

CMP: INR333
Rating: Not Rated
Date: December 06, 2025

Bloomberg:	DYCL:IN
52-week range (INR):	548 / 228
M-cap (INR cr):	1,616
Promoter holding (%)	68.18

Key takeaways from the management interaction:

- DYCL manufactures cables up to 66KVA used in power distribution and a select range of specialty conductors and cables.
- It largely receives orders from EPC contractors and DISCOMs. DYCL serves clients across more than 42 countries, including Tata Power, Adani Power, L&T, Kenya Power, Bharat Heavy Electricals (BHEL), NTPC, MMTC, and various state and private utilities. The top 10 clients constitute ~45% of total revenue.
- Its revenue mix is broad-based, with high/low voltage cables accounting for ~55%/~37%, and conductors constituting ~8% of H1FY26 revenue.
- It recently launched renewable cables used in solar and wind parks. The management pegged the opportunity size ~INR5,000cr.
- It has announced a greenfield capex project that will include an e-beam facility and production of solar DC cables. The plant is expected to become operational in Q1 FY27.
- DYCL has facilities for hydrogen and water curing. The new plant will be equipped with electron beam curing for which approval from the Bhabha Atomic Research Centre (BARC) is in advanced stages.
- Aluminium forms 60–70% of its inputs. Typically, aluminium cables are used for transmission and distribution, while copper cables are preferred for household wiring.
- The management ruled out any plans to venture into B2C business of wires or extra high-voltage direct current cables in the near future.
- EBITDA margin is largely consistent between high-tension and low-tension cables and instead fluctuates based on the specifics of each project or order.
- It raised its monthly revenue potential to ~INR135cr from ~INR100cr by debottlenecking its facility. Greenfield expansion, with a capex of ~INR45cr and asset turnover of ~6x, is expected to take its monthly revenue potential to ~INR160cr from the start of FY27.
- The business faces seasonality. Capacity utilisation in the first quarter stands ~70%, increasing to ~90% by the fourth quarter, bringing blended utilisation to ~80%.
- At present, 10–15% of its revenue accrues from exports. If the tariff uncertainty with the US settles, it could rise to 15–20% with DYCL receiving approvals for three products.
- DYCL has projected growth at 1.5x the industry rate, with an EBITDA margin of 10–11%.

Valuation and view

At the CMP of INR333, the stock trades at 24.4 TTM P/E. This stock is not rated.

Ecos (India) Mobility & Hospitality

nuvama professional clients group

We recently hosted the management of Ecos (India) Mobility & Hospitality (ECOSMOBL), a market leader in corporate mobility solutions, delivering comprehensive chauffeured car rental (CCR) and employee transportation services (ETS) to India's top corporates. With over 29 years of industry experience and a pan India footprint spanning 128 cities, it serves more than 1,200 organisations. It stands out for its asset-light business model (94% of its fleet of more than 18,000 vehicles is vendor-owned) and its strong technological backbone, thus ensuring high operational efficiency and customer retention. It serves a wide range of industries, establishing itself as the preferred corporate mobility partner for MNCs, global capability centres (GCCs), and companies operating in the IT and ITeS, healthcare, pharmaceutical, e-commerce, manufacturing, airlines, and business process outsourcing space. This positions ECOSMOBL as a high-growth player, with resilient fundamentals and a scalable model in an evolving corporate mobility landscape. The stock is not rated.

CMP: INR228
Rating: Not Rated
Date: December 06, 2025

Bloomberg:	ECOSMOBL:IN
52-week range (INR):	358 / 165
M-cap (INR cr):	1,367
Promoter holding (%)	67.79

Key takeaways from the management interaction:

- The management feels that the hybrid work model has likely peaked and will be a positive structural driver for ETS demand. Growth areas for CCR include event transportation. Here, it is targeting premium clients and tie-ups with tour operators.
- ECOSMOBL is broadening its geographic reach in Tier II and III cities across India while exploring international markets.
- Key clients include Interglobe Aviation (IndiGo), HCL Corporation, Deloitte, Urban Company, IndusInd Bank, HDFC Life, Walmart Global Tech, Mercer, Fidelity, EXL Service, Thomas Cook India, and even the Ministry of External Affairs. The company has also supported high-profile events such as the G20 Summit.
- In the CCR segment, its competitors include Avis India and ORIX India, even as it competes primarily with Wise Travel India and Mahindra Logistics in the ETS space.
- CCR services experience seasonality, with higher activity typically seen after the monsoons, whereas ETS operations are largely stable all year round.
- Employee costs rose in FY25 owing to higher bonuses, which were awarded to prevent talent poaching. The management stressed on best-in-class HR practises to lower attrition across the organisation.
- Chauffeurs undergo extensive background checks, interviews, and training before being onboarded to ensure consistent, high-quality service delivery. The management said their business expands more effectively through word-of-mouth referrals.
- Around 60% of revenue accrues from clients who have been with the company for over five years. Average contract tenure with clients is three to four years.
- The management has guided at a revenue of ~INR800cr for FY26. Going forward, an 18–20% revenue CAGR is expected to be maintained, with an EBITDA margin of 13–15%. Margin in CCR is 2–4% higher than ETS.
- Asset light business model with a large vendor network helps it maintain return ratios higher than ~30% and the same is expected to continue in future.
- Premiumisation and a greater geographical presence are ECOSMOBL key focus areas. It is looking to launch a B2C application as well, offering premium transportation services.

Valuation and view

At CMP of INR228, the stock trades at a P/E of 23.3x and an EV/EBITDA of 14.2x on a TTM basis. The stock is not rated.

Entero Healthcare Solutions

nuvama professional clients group

We recently hosted the management of Entero Healthcare. Founded in 2018, ENTERO was established with the vision of building a pan-India, technology-enabled healthcare distribution platform, aimed at ushering greater organisation and efficiency into India's highly fragmented supply chain. It operates on a dual-engine model, comprising demand generation and demand fulfilment. Through integrated commercial solutions, it aids demand generation by helping healthcare manufacturers with sales, marketing, and brand building initiatives. Its comprehensive distribution services ensure demand fulfilment to pharmacies and hospitals across India. Over the years, ENTERO has carried out 53 acquisitions, significantly expanding its national footprint and enabling it to capitalise on ongoing market consolidation. Its focus is on boosting client penetration and wallet share and deepening tie-ups with manufacturers, aided by sustained investments in technology, scale-driven efficiencies, and expansion into adjacencies and private labels. ENTERO posted a revenue and PAT CAGR of 26% and 73% during the past three years. The stock is not rated.

CMP: INR999
Rating: Not Rated
Date: December 06, 2025

Bloomberg:	ENTERO:IN
52-week range (INR):	995 / 1,564
M-cap (INR cr):	4,347
Promoter holding (%)	52.42

Key takeaways from the management interaction:

- The management expects the pharmaceutical distribution and marketing industry to grow at 8–9%, with ENTERO targeting growth at 1.5-2x the industry rate. The market remains highly fragmented, with an estimated size of ~INR 2,40,000 crore, and the top three players together holding only 10-12% share.
- The company operates over 100 warehouses across more than 40 cities, serving over 500 districts. Its network includes more than 4,000 employees, over 83,000 SKUs, more than 2,800 healthcare product manufacturers, over 85,000 retail pharmacies, and more than 2,800 hospitals.
- ENTERO uses acquisitions to scale in a highly fragmented market and accelerate consolidation. Acquired revenue is classified as inorganic in the first year and becomes organic thereafter. The company typically targets acquisitions of ~INR 50 crore in size, focusing on city leaders, players with complementary product lines, or those offering strategic geographic or operational advantages.
- Standard distributors typically cover 50–60 km, whereas ENTERO covers up to 150 km, enabling wider reach and greater efficiency. The management indicated that distribution costs stand at ~0.7% of revenue.
- The company runs its proprietary ERP, which handles ~50% of operations, alongside five to six other ERP systems.
- In terms of revenue mix, retailers contribute ~70%, hospitals 20–25%, and medtech the balance. The contribution of medtech is expected to rise to ~15% over time, supporting margin improvement given its double-digit margin profile.
- For FY26, the management has guided for a positive OCF of ~INR100 crore (vs. negative OCF of INR109cr in FY25) and aims to reduce working capital days to 60 from 66.
- It may raise INR 100-150 crore in debts by Mar'26 while maintaining net debt/EBITDA below 1x.
- Consolidated revenue growth for FY26 is pegged at ~30%, including ~INR 500 crore from acquisitions. EBITDA margin is expected to be ~4%, with a 50-75 bp improvement as acquisitions stabilise. Organic growth is guided at ~15%, with consolidated growth potentially higher due to ongoing acquisitions.

Valuation and view

Based on the management's guidance, the stock trades at a P/E of 26x / 22x FY26/FY27 EPS. The stock is not rated.

Fedbank Financial Services

nuvama professional clients group

We recently hosted the management of Fedbank Financial Services (FEDFINA), a non-deposit-taking NBFC (NBFC-ND-SI). It is a subsidiary of Federal Bank, which commands a 61.7% stake. It primarily caters to MSMEs and emerging self-employed individuals (ESEIs). As of H1FY26, it has a presence across 18 states and Union Territories, with 699 branches and an AUM of INR16,136cr. Over the past few quarters, it has simplified its portfolio by paring down its unsecured business loans (BL) and focusing on its new 'twin-engine' growth model, spanning gold loans and loan against property (LAP), thereby making the book nearly fully secured. We reiterate 'BUY' with a TP of INR190 (1.9x FY28E P/ABV), which offers a potential upside of ~35% from its CMP.

CMP: INR139
Rating: BUY
Date: December 6, 2025

Bloomberg:	FEDFINA
52-week range (INR):	113 / 169
M-cap (INR cr):	5,223
Promoter holding (%)	61

Key takeaways from the management interaction:

- The new management, which took charge towards the end of FY24, observed weak disbursements and low productivity, prompting a gradual paring down of unsecured BL. The share of BL fell to 2% in Q2FY26 from ~15% in FY24, with a full exit targeted by the end of the fiscal.
- Capital released from the unsecured book is being redeployed into high-yield, secured products to improve RoA and risk-adjusted returns.
- To address historical stress in small-ticket LAP, it strengthened its credit and collections infrastructure via leadership changes, verticalization, automated decision engines, and technology-enabled risk controls.
- Gold loans have emerged as the core growth engine, compounding at 35–40%, with strong tonnage growth, high productivity, and rapid scale-up of doorstep delivery.
- The doorstep model contributes ~15% of business and is backed by expansion into North and West India, with plans to open 200 branches.
- The portfolio mix is intentionally balanced between gold loans and LAP (~46%/54%), with medium-ticket LAP providing stability and small-ticket LAP being rebuilt gradually.
- The dual model of gold loans and LAP provides a natural hedge, cushioning the portfolio during cycles, with gold performing in downturns and LAP in stable environments.
- The management acknowledged its earlier overexpansion into ST-LAP without adequate collections. To remedy this, it has implemented cultural and incentive restructuring to prevent a recurrence.
- FEDFINA guided at calibrated AUM growth of 20–25% annually, prioritising credit quality and predictable returns over aggressive scale.
- It expects a total PBT improvement of ~120bp over FY25–27. Of this, ~80bp is expected to accrue from lower credit costs (~1% guidance) as asset quality normalises. Operating leverage and cost efficiencies from branch co-location, technology rationalisation, and process automation will contribute another ~40bp.
- It sees steady improvements in credit cost, cost efficiency, and portfolio mix driving RoA towards 2.7–3% over the next two years.

Valuation and view

FEDFINA's secured-led growth, strong ALM profile, and improving credit costs position it well for steady compounding. We expect ~18% AUM CAGR (23% excluding BL), stable NIM (~8.5%), and rising operating leverage to lift RoA/RoE to ~2.7%/~14% by FY28. We reiterate 'BUY' with a TP of INR190 (1.9x FY28E P/ABV), which offers a potential upside of ~31% from its CMP.

GNG Electronics

nuvama professional clients group

We recently hosted the management of GNG Electronics (EBGNG), India's largest refurbisher of laptops and desktops. It is among the largest refurbishers of information and communication technology (ICT) devices globally, with a significant presence across India, the US, Europe, Africa, and the UAE. It was Microsoft India's largest authorised refurbisher in FY25. It also serves as an IT asset disposal partner for India's second-largest software company in terms of market capitalisation as of FY25, procuring their used IT assets. It follows a repair over replacement approach, which provides cost advantages and helps achieve true sustainability by reducing the carbon footprint. The stock is not rated.

CMP: INR315
Rating: Not Rated
Date: December 7, 2025

Bloomberg:	EBGNG:IN
52-week range (INR):	300 / 402
M-cap (INR cr):	3,594
Promoter holding (%)	78.71

Key takeaways from the management interaction:

- EBGNG follows a repair over replacement philosophy and operates major refurbishment facilities in Navi Mumbai and Sharjah, along with additional units in the US and UAE, making a total of eight to nine facilities globally.
- It repairs and refurbishes motherboards, LCD screens, laptops, desktops, ICT devices, workstations, and servers, aided by in-house training programmes for engineers and an internal fabrication capability to handle damaged parts.
- Around 60–70% of procurement accrues from corporate suppliers, with 20–30% contributed by top-tier corporates alone. The average age of incoming devices is around three to four years.
- It is seeing rising demand for high-end refurbished computers globally (30–35% of the total market). It is also expanding into newer markets such as Japan and Korea.
- The management explained that re-use is the most effective form of recycling and that many countries have begun mandating a minimum percentage of refurbished devices in government offices, which strengthens long-term demand.
- The typical procurement-to-sale cycle ranges between 90 and 100 days, with material arriving from 17–18 countries in Europe. The material is subsequently sold across similar geographies.
- EBGNG buys 100–150k units in bulk. Its employees refurbish three to seven units per month on average across a workforce of ~1,100 people.
- Its overall average selling price (ASP) has been rising, growing 10% over the years, with a 3–4% improvement in the past year alone. Nearly 70% of the product mix is now above the Intel i3 configuration range.
- As warranty costs have been extremely low (10–12bp), it plans to begin provisioning for warranties. All products sold locally/globally carry a three-year/one-year warranty.
- The management reiterated that the refurbished computing industry is growing at over 40%, with ASP growth now outpacing volume growth. Strengthening global demand, increasing supply from corporates, and supportive government regulations are collectively shaping a significant long-term growth opportunity for EBGNG.

Valuation and view

Consolidated revenue/EBITDA/PAT grew 25%/42%/43% YoY to INR440cr/INR47cr/INR33cr in Q2FY26. Revenue/EBITDA/PAT stood at INR752cr/INR79cr/INR52cr in H1FY26. At the CMP of INR315, the stock trades at a P/E ratio of 45.8x and an EV/EBITDA of 29x on a TTM basis. The stock is not rated.

Godawari Power & Ispat

nuvama professional clients group

We recently hosted the management of Godawari Power & Ispat (GODPI), a mid-sized integrated steel manufacturer with over 25 years of industry experience. Incorporated in 1999, it operates across the full steel value chain — from iron ore mining and pellet production to sponge iron, billets, wire rods, mild steel wires, and ferro alloys. With two captive iron ore mines and high-grade pellet manufacturing, it earns a premium of INR1,000–1,500/t over market prices.

Its products are approved by Power Grid Corporation of India for use in transmission projects, reinforcing its quality credentials. GODPI is undergoing significant expansion to boost its mining and pellet capacities, scaling up its solar power installations, and setting up a 0.7mt cold rolling mill (CRM) complex. Its integrated operations and backward linkages position it well for sustained growth in the steel sector. The stock is not rated.

CMP: INR233
Rating: Not Rated
Date: December 6, 2025

Bloomberg:	GODPI:IN
52-week range (INR):	146 / 290
M-cap (INR cr):	15,590
Promoter holding (%)	63.51

Key takeaways from the management interaction:

- Its 2mtpa pellet line has been commissioned, with 80–85% utilisation seen from Q4FY26.
- Public hearing for expansion of the Ari Dongri iron ore mine (to 6mtpa from 2.35mtpa) has been concluded, with final environmental clearance expected by December end. The ramp-up will take output from 4.5–5mtpa in FY27 to 6mtpa by January 2027.
- Beneficiation expansion to 6mt from 0.6mt has been completed. Full performance is expected from Q3FY27 after the monsoon ends.
- At full pellet capacity, GODPI requires 5.7–5.8mt iron ore. Captive mine output will fully meet requirements from FY27.
- Galvanized fabricated products saw strong growth after receiving approvals from PGCIL. It has enabled GODPI to supply transmission-grade structures with billets that are now comparable to top producers.
- Land acquisition and major equipment orders for its 0.7mtpa CRM complex have been completed, with commissioning expected by April 2027. Capex of INR900cr has been funded via debt (INR600cr) and internal accruals. The management expects a conversion margin of 7–10%, with 50–60%/over 80% utilisation in year one/two.
- A battery energy storage system (BESS) project of 10GWh in Maharashtra is progressing well. Land has been acquired, and machine orders have been initiated. Commissioning is targeted for April 2027. BESS business model is assembly-only, with cells imported from China. The management expects a margin of 9–10% with low capex intensity.
- Combined CRM and BESS capex has largely been funded through internal accruals and debt. GODPI raised INR100cr via a preferential issue which was largely subscribed by the promoters to add liquidity.
- Its debt-free status will shift to a net debt of INR1,200–1,500cr by FY27–28 due to the ongoing capex. However, the management reassured that its debt is manageable given its cash flows and margin profile.
- Long-term visibility on operations and capex execution is expected by Q4FY27–FY28 as mining expansion, pellet ramp-up, CRM, and BESS all converge operationally.

Valuation and view

Consolidated revenue/EBITDA/PAT grew 3%/5%/2% YoY to INR1,308cr/INR260cr/INR162cr in Q2FY26. Revenue/EBITDA/PAT stood at INR2,631cr/INR584cr/INR378cr in H1FY26. At the CMP of INR233, the stock trades at a P/E of 21x and an EV/EBITDA of 12.3x on a TTM basis. The stock is not rated.

Influx Healthtech

nuvama professional clients group

We recently hosted the management of Influx Healthtech. Established in 2020 by Dr Munir Chandniwala, this integrated contract development and manufacturing organisation (CDMO) is focused on nutraceuticals, cosmetics, pet care, and homecare products. INFLUX offers end-to-end services across product development, regulatory aid, and large-scale manufacturing, backed by strong capabilities in dietary supplements, herbal and ayurvedic formulations, cosmetic products, veterinary feed supplements, and homecare categories. It recently listed on NSE Emerge following an IPO of ~INR58.6cr, comprising a fresh issue/ OFS of ~INR48cr/~INR10.6cr. The proceeds are being utilised to set up new nutraceutical and veterinary-food facilities and to upgrade machinery in the homecare and cosmetics divisions. INFLUX serves a wide global client base, including MNCs, fast-growing D2C brands, and specialised healthcare players. It operates three advanced manufacturing units in Palghar, Maharashtra. The stock is not rated.

CMP: INR225
Rating: Not Rated
Date: December 06, 2025

Bloomberg:	INFLUX:IN
52-week range (INR):	120 / 249
M-cap (INR cr):	521
Promoter holding (%)	73.53

Key takeaways from the management interaction:

- Nutraceuticals remain the core business, contributing ~90% to revenue and continuing to deliver healthy growth. It operates two nutraceutical plants, one of which is on rent, with a monthly capacity of ~20,000 bottles.
- It is expanding its daily manufacturing capacity to ~27,300kg in FY26 from ~19,800kg in H1. The management expects the capex funded through the IPO proceeds - ~INR23cr /~INR11cr for the nutraceutical/veterinary plant, to drive its peak revenue potential of INR450–500cr once facilities reach optimal utilisation.
- The veterinary segment is still at a nascent stage. The management expects the market to mature meaningfully only by 2029-30. It is scaling up its veterinary capacity significantly, moving to a 1,000kg/hour line from a 100kg/hour line.
- Cosmetics is a small but higher-margin vertical, with the management guiding at INR9-10cr revenue from this division in FY26.
- INFLUX is also adding a beverage line, driven by strong demand trends in the beverage and snacking categories.
- It operates purely on a white-labelling model. It has no brands of its own in the market.
- Product mix comprises tablets (25-30%), capsules (15-20%), and powders (30-35%), with ~70% of business being prescription driven.
- Customer concentration is high, with the top five customers contributing ~50% of total revenue. Most clients are acquired through referrals.
- The management has guided at a revenue growth of 30-40% over the next few years, aided by capacity expansion and category diversification. It is targeting a revenue of ~INR150cr/~INR200cr in FY26/FY27, with a peak potential of ~INR500cr by FY29 as the expanded facilities stabilise. EBITDA margin is seen as steady.

Valuation and view

Based on management's guidance, the stock trades at a P/E of 25x and 17x FY26/FY27 EPS. The stock is not rated.

Interarch Building Solutions

nuvama professional clients group

We recently hosted the management of Interarch Building Solutions (INTERARC), one of India's leading turnkey pre-engineered steel construction solution providers, with integrated facilities for design and engineering, manufacturing, and on-site project management capabilities for the installation and erection of pre-engineered steel buildings (PEB). It is the second-largest integrated PEB player in the country, with a total installed capacity of 2,01,000mtpa and a market share of 6.5%. The stock is not rated.

CMP: INR2,349
Rating: Not Rated
Date: December 7, 2025

Bloomberg:	INTERARC:IN
52-week range (INR):	1,264 / 2,763
M-cap (INR cr):	3,940
Promoter holding (%)	59.43

Key takeaways from the management interaction:

- The company has executed a few export orders in the past. It is actively looking to scale up exports, aided by a dedicated sales team targeting Africa, the US, Canada, and the neighbouring markets.
- Exports contribute only 1–2% of total revenue but offer higher margin than the domestic business, providing a meaningful long-term opportunity.
- INTERARC has partnered with Mold-Tek Technologies to strengthen its design and engineering capabilities for North American markets and is engaging directly with general contractors in Canada to grow this business.
- Heavy steel fabrication is emerging as a key focus area as many components in this segment weigh 5–10t. A dedicated heavy fabrication facility is being developed so as not to compromise PEB output, although its existing facilities can handle such work.
- A new heavy fabrication plant with a capacity of ~21,000t is being set up in Andhra Pradesh at an estimated cost of INR90–100cr. It is expected to turn operational by June–July 2026. Land for the project has been secured.
- Heavy structure work is currently outsourced to players like Jindal Steel & Power. But once the Andhra Pradesh facility is operational, INTERARC will execute this work both for its captive needs and external customers.
- Margin in the initial phase of the heavy fabrication unit will be a tad lower as the business is primarily fabrication without design and engineering. RoCE is expected to be structurally higher due to faster cycles and better working capital metrics.
- A new PEB facility in Gujarat is expected to come up by November 2026, adding significantly to its overall capacity and geographic presence.
- Nearly 50% of its order book comprises large projects worth over INR35cr, with the balance accruing from mid-sized and smaller ones.
- Realisations in domestic PEB stand ~INR110/kg. EBITDA margin is typically in the 8.5–10.5% range, with larger orders delivering a higher margin of ~100bp.
- INTERARC maintains strong operational efficiency, with ~6x asset turns in PEB, a net working capital cycle of 30–31 days, and ~60 days of inventory at any point in time.
- Utilisable capacity across plants is typically 80–90% of installed capacity. The upcoming new facilities are designed to be more efficient and better laid out, improving throughput and operating leverage.

Valuation and view

Revenue/EBITDA/PAT grew 52%/68%/52% YoY to INR491cr/INR42cr/INR32cr in Q2FY26. Revenue/EBITDA/PAT stood at INR872cr/INR74cr/INR60cr in H1FY26. At the CMP of INR2,349, the stock trades at a P/E ratio of 30.9x and an EV/EBITDA of 20.3x on a TTM basis. The stock is not rated.

Kinetic Engineering

nuvama professional clients group

We recently hosted the management of Kinetic Engineering (KNEL), one of India's long-established automotive component manufacturers with over five decades of expertise. It operates from a large integrated facility spread across 50 acres in Ahmednagar, aided by a workforce of over a thousand. Its business is built around three strong verticals that cater to domestic and global OEMs. This includes: i) the transmission division that manufactures gearboxes, planet gears, sun shafts, and other precision parts; ii) the driveline division which produces spline yokes, stub shafts, and related components; and iii) the fast-expanding EV division which supplies rigid axles, trans axles, chassis bodies, and two-wheeler gearbox assemblies for new energy platforms. Over the years, it has built long-standing relationships with major customers like Tata Motors, Mahindra & Mahindra (MM), Ashok Leyland (AL), and several international clients. The stock is not rated.

CMP: INR300
Rating: Not Rated
Date: December 6, 2025

Bloomberg:	KNEL:IN
52-week range (INR):	143 / 385
M-cap (INR cr):	649
Promoter holding (%)	60.5

Key takeaways from the management interaction:

- KNEL launched EV scooters (DX and DX+) in July, with multiple upgraded features. The initial go-to-market strategy includes opening 50–60 dealerships on a city-by-city basis, each aided by a dedicated service centre. Additional variants, including a lower-cost model, are planned over the next three years to widen its market reach.
- It is deploying LFP battery technology in its EV scooter, offering higher efficiency and nearly double the charging cycles versus nickel manganese cobalt (NMC) batteries, providing a first-mover edge. The current range stands ~110km per full charge.
- Sales targets stand at 50,000/1,25,000/2,25,000 units in FY26/FY28/FY30, translating in an estimated 6–7% share of the EV market.
- The Ahmednagar facility has a monthly production capacity of 15,000 scooters, supported by a new technical centre for staff training. Breakeven for the scooter business stands ~1lk units annually, with an EBITDA/PAT margin of 5–6%/4–5%.
- In the auto components business, the management aims to scale revenue to INR600cr over the next five years from INR150cr, aided by fresh orders worth ~INR100cr from existing and new customers. Groupe Renault and American Axle & Manufacturing Holdings have indicated potential orders of ~INR100cr each over the medium term
- It is entering new areas such as precision engineering, aerospace, and defence with ongoing R&D activity.
- A stout marketing push is ongoing towards auto OEMs to grow the component business.
- The EV scooter business operates under the subsidiary Kinetic Watts and Volts India, of which KNEL owns ~80%, with the balance held by the promoter family.
- KNEL manufactures gears and shafts in-house and has an assembly line for complete gearbox systems supplied to MM and AL.
- Gearbox production caters to medium commercial vehicles (~40% of revenue), driveline exports for pickup vehicles (~40%), Indian passenger vehicles (10%, including Scorpio and Bolero), tractors (5% via the Carraro Group), and EVs (5%).
- Promoters have infused ~INR100cr through warrants into KNEL, strengthening the Balance Sheet and enhancing expansion visibility.

Valuation and view

At the CMP of INR300, the stock trades at a P/E of 166x and an EV/EBITDA of 46x on a TTM basis. The stock is not rated.

Landmark Cars

nuvama professional clients group

We recently hosted the management of Landmark Cars. Established in 1998, Landmark Cars (LANDMARK) is one of India's leading premium automotive retail companies. Starting as a single Honda dealership in Ahmedabad, it has come a long way to become a multi-brand and multi-location retailer. Company has dealerships of various brands like Mercedes-Benz (MBG, 24 outlets), Honda Cars (26), Volkswagen (VW, 23), Jeep (15), MG (15), BYD (eight), Kia (eight), Mahindra (eight), Renault (eight), and Ashok Leyland (four). It has been aggressively expanding over the last two years and has added more than 30 outlets since FY24, leading to a total of 139 centres in India. It added three new fast-growing brands in FY25 – MG, Mahindra, and Kia. It operates in four main segments: i) new vehicle sales (contribute 79% to pro forma revenue), ii) after sales and car care (18%), iii) pre-owned vehicle sales (2%), and iv) finance and insurance (1%). The stock is trading at a TTM P/E ratio of 108x. The stock is not rated.

CMP: INR515
Not Rated
Date: December 6, 2025

Bloomberg:	LANDMARK:IN
52-week range (INR):	703 / 306
M-cap (INR cr):	2,137
Promoter holding (%)	49.8

Key takeaways from the management interaction:

- LANDMARK Car is one of India's leading premium automotive retailers with dealership of some global premium brands like Mercedes-Benz (MBG), Honda, Jeep, VW, BYD, MG and Kia. It has become the largest dealer in India for MBG (16.5% share), VW (9% share), BYD (21% share), Honda (6%), and Jeep (18%), and among the top three dealers for MG (4%).
- **Guidance:** Company guides for gross margin expansion by 100bps in H2FY26 vs H1FY26.
- MBG is their biggest customer which contribute 40% of group sales. Company operates as agency model for MBG, for which they recieve a particular commission for the sales. While, company reported sales only includes MBG's commission, it also reports pro forma sales which includes total MBG sales. BYD is second biggest customer, where company has 21% market share. Company has onboarded MG, MM and Kia as new customer over last one year.
- Company operates 140 outlets which includes 75 showrooms. It has added 40 new touchpoints added over the last 24 months. The focus has been on high growth urban clusters, while exiting from underperforming regions.
- **After sales business:** After sales business is sticky business which negates the cyclicity of auto business. Additionally, this business is very high margin business – 40% gross margin (vs 8% gross margin for new car business) and 17-18% EBITDA margin. Generally, it taks 1-2 years for after sales business to grow after on boarding customers. Hence, company expects MM, MG and Kia after sales business to become fruitful from next year onwards.
- **GST2.0** impacted Q2FY26 earnings, with customers deferring purchases until September 22 and dealers bearing the impact of cess. Company liquidated some inventory while bearing the impact of CESS, which impacted gross margin by 350bp YoY. Company has not made any provision in Q2FY26. However, the above impact is transitionary as management expects to see gross margin expansion by 100bps in H2FY26.
- **Distribution strategy:** Company is looking to partner with luxury and premium OEMs in the high growth markets. Company's idea is to establish a relationship with OEMs and then expand the brand in domestic market while eyeing to become largest player for OEMs. After sales revenues starts flowing 1-2 years after on boarding new customers. Premium OEMs want to work with more professional and smaller set of dealers.
- **Store economics:** Total capex to setup a store is 3.5-4cr (excluding rental deposits). Generally, it takes nine to tweleve months for store to reach breakeven, with payback period of 4 years. As of now, only two outlets are owned and rest of the stores are leased. Company doesn't gave franchise model yet, but may look into future.

Lords Mark Industries

nuvama professional clients group

Unlisted
Date: December 06, 2025

We recently hosted the management of Lords Mark Industries. From its origins as a paper business in 1998, Lords has evolved into a diversified conglomerate, with operations across three major verticals: in-vitro diagnostics (IVD), renewable energy and LED lighting, and the legacy paper division. It is in the process of listing through a reverse merger with Kratos Energy (now rechristened Lords Mark India), which is listed on the BSE and NSE.
It posted a revenue/PAT CAGR of 37%/129% over FY21–25. The renewable energy/IVD and medtech segment contributed 42%/47% to FY25 revenue, with the legacy paper business accounting for the balance. To sharpen its focus on the high-growth core segments of IVD and medtech and renewable energy, Lords plans to demerge the paper business by FY26 end. It is yet to be listed post-merger. We do not have an active view on the stock.

Key takeaways from the management interaction:

- Lords aims to expand in the fast-growing medtech space with niche, intellectual property (IP)-led solutions targeting critical gaps in dialysis, cancer screening, and early detection of non-communicable diseases (NCD). The focus is on scalable innovations, offering strong margin and long-term growth potential.
- It is pursuing an addressable market comprising around INR20,000cr/INR18,000cr/INR5k cr/INR8,000cr/INR7,000cr in dialysis/cancer/sickle cell/NCD imaging/ tuberculosis.
- It operates an ISO-certified facility equipped with automated R&D labs and AI-enabled platforms, designed to scale technologies across dialysis, cancer, and NCD diagnostics.
- Multiple medtech products are slated for launch over the next three years, including:
  - *Renalyx RXT21* dialysis system (2026)
  - Home dialysis platform and a breast cancer screening device (2028)
  - *Oncospectra* and *TBTruth Gen 2 – AI Enhanced* (2029)
  - Commercial launch of liver dialysis (2029)
  - A cancer dialysis platform (2030)
- Gross margin in medtech is expected to be in the 40–65% range. Margin in dialysis system (Renalyx) stands at 40–55%, oral cancer screening device ~65%, sickle cell AI platform 55–60%, and thermal imaging NCD screening ~50%.
- The lighting and renewable division has gained momentum since its 2012 foray into LED solutions, aided by government contracts, an exclusive partnership with Philips India for LED and solar lighting, and an order book of ~INR2,100cr (INR301cr executed in FY25). Most of the remaining orders are expected to be fulfilled over the next three years, underpinning strong segment growth.
- The legacy printing paper business, launched in 1998 under the 'SAPPHIRE' brand and supplying key institutions such as Indian Railways and Life Insurance Corporation, will be demerged into a separate entity by FY26 end.
- The management has set an ambitious revenue/EBITDA CAGR target of 50%/78%, over FY25–28, driven by a 47%/64% revenue CAGR in renewables/medtech and IVD segment, assuming product rollouts proceed as planned.

MAAN Aluminium

nuvama professional clients group

We recently hosted the management of MAAN Aluminium. Established in 1989, MALU is one of India's leading manufacturers of aluminium extrusion products. It manufactures and sells aluminium profiles which find application in various end-user industries like solar, construction, automobile, agriculture, defence, and railways. It operates in two main segments: trading goods (~68% of sales) and manufacturing (~32%). Within manufacturing, it produces aluminium profiles of various shapes and sizes. In trading, it is the exclusive distributor for Hindalco Industries in North and South India, where it sells aluminium billets and ingots. Exports contribute ~55% to total volumes, with the US being key markets. It raised its extrusion capacity to 24,000mt from 10,000mt at its flagship plant in Pithampur. Its foundry/anodizing/machining capacity stands at 12,000mt/3,600mt/ 1,400mt. Though the management hasn't provided any specific guidance, it expects new capacity to boost manufacturing revenue by 5x, even as the trading business stays flat. The stock is trading at a TTM P/E ratio of 52.2x. The stock is not rated.

CMP: INR150
Not Rated
Date: December 6, 2025

Bloomberg:	MAANALU:IN
52-week range (INR):	155 / 76
M-cap (INR cr):	753
Promoter holding (%)	58.9

Key takeaways from the management interaction:

- MALU has a presence in two segments: i) aluminium extrusion, and ii) trading.
- In **trading**, it is the exclusive distributor of aluminium billets and ingots in North and South India. It carried out a sale of 30,000mt as part of the trading business. This business operates at a 1% EBITDA margin with limited value addition.
- **Manufacturing:** Within manufacturing, MALU produces aluminium profiles in various shapes and sizes. The focus has been on increasing aluminium extrusion capacity as it is a relatively higher margin business. This niche aluminium extruder player aims to expand into solar, automotive, aerospace, and nuclear applications. Within manufacturing, plain vanilla extrusions/value-added processes command a 7–8%/15–18% EBITDA margin.
- **Targets:** Company doesn't give any hard guidance but is confident of increasing sales by 5x over the next three to four years and an EBITDA margin of 15-18% over the next three years.
- **Industry overview:** The industry is highly fragmented with the unorganised sector constituting a major chunk. Within the organised space, MALU is the fifth-largest aluminium player after Jindal Aluminium, Hindalco Industries, and Century Metal Recycling. It is one of the largest players in the export market.
- **Demand profile:** In mid-term, company expects trading and manufacturing to contribute 50-50 of sales. Within manufacturing, company expects 15% sales coming from Auto Sector, 10-15% sales to come from solar space and rest from other industrial space.
- **Margin profile:** Trading business operates at around 1% EBITDA margin, plain vanilla extrusion operates at 7-8% EBITDA margin, value added process delivers at 15-18% EBITDA margin. Exports are at higher margin than domestic business.
- **Capacity:** MALU raised its plain vanilla extrusion capacity to 24,000mt from 10,000mt. It has a foundry/anodizing/machining capacity of 12,000mt/ 3,600mt/1,400mt. Company added four hydraulic presses, ranging between 900t and 3,000t in FY25, to extrude larger products with a width of 300mm (from 160–170mm) and process 7 series Aluminium alloys.
- **Capex plans:** The company incurred INR40cr on a new Italian press, which is expected to come online in FY26. It plans an additional capex of ~INR130cr over the next three years. This new capex will mainly focus on powder coating, anodizing, and the machining process — a value-additive and higher margin business.
- **FY25/1HFY26 weakness:** MALU is India's largest aluminium exporter in terms of volumes. Around 90% of its exports are to the US. Export volumes have been impacted by US tariffs and anti-dumping duty. Additionally, the biggest impact has been on value added products, which resulted into weaker margin. Management expects tariffs issue to be resolved soon. Company has not lost any market share or clients despite the above headwinds.
- **Tariffs and anti-dumping duty:** The US government has not imposed any anti-dumping duty on MALU while imposing 19–38% duties on other aluminium extrusion manufacturers.

Valuation and view

The stock trades at INR150, at 52.2x P/E on a TTM basis. The stock is not rated.

Macpower CNC Machines

nuvama professional clients group

We recently hosted the management of Macpower CNC Machines. Founded in 2003, MACPOWER is a leading CNC machine manufacturer with one of the widest portfolios in the industry, covering 27 series, more than 375 variants, and over 12,040 installations. Its eight-acre facility in Metoda G.I.D.C., Rajkot, has an annual capacity of 2,500 machines and operates at 80–85% utilisation. It serves automotive, defence, capital goods, and other precision industries through a strong nationwide network of 39 sales and service locations and more than 220 engineers.

Led by Mr Rupesh Mehta (CMD) and Mr Nikesh Mehta (Whole-Time and CEO), it is expanding its presence in defence and aerospace and focusing on exports through global exhibitions. Product innovation is central, reflected in developments in five-axis and high-speed machining centres and Industry 4.0-enabled smart machines. The stock is not rated.

CMP: INR945
Rating: Not Rated
Date: December 6, 2025

Bloomberg:	MACPOWER:IN
52-week range (INR):	601 / 1,611
M-cap (INR cr):	949
Promoter holding (%)	73.2

Key takeaways from the management interaction:

- MACPOWER has achieved an average realisation of INR20–22lk per machine. It has begun securing corporate orders of 10–12 machines per client. Utilisation stands ~85%.
- A long-term transformation roadmap is underway, with a shift toward high-end machines that cater to defence and aerospace, where margin profiles are superior. Direct customers include Indian Space Research Organisation (ISRO) and Defence Research and Development Organisation (DRDO).
- The Gujarat government has allotted 60 acres for the next manufacturing line. Over the next five years, total capacity is expected to scale to 10,000 machines from 2,500 machines, with 50% dedicated to defence and aerospace.
- Phase I expansion requires a capex of INR150–220cr to add 2,500 incremental machines, along with an additional line for planned foreign collaboration. At the expanded 2,500-machine level, revenue potential stands ~INR500cr.
- At 10,000-machine capacity, the management sees a revenue potential of ~INR2,500cr. No fundraising is planned at present. The Balance Sheet is debt-free unlike its peers.
- The company is exploring contract manufacturing partnerships to enter global markets.
- Its product portfolio spans 19,000 components and 365 models, with in-house manufacturing of ~90%, enabling tight cost control and quality consistency.
- About 70% of revenue accrues from catalogues or standard machines. The management aims to raise the revenue share from the defence and aerospace segment, aided by high-specification machine launches.
- The order book stands ~INR350cr, bolstered by a robust pipeline of ~INR986cr.

Valuation and view

At the CMP of INR945, the stock trades at 34x P/E and 21x EV/EBITDA on a TTM basis. The stock is not rated.

Max Estate

nuvama professional clients group

We recently hosted the management of Max Estates. MAXESTAT is an integrated real estate platform, with a growing presence across premium residential, commercial office, and mixed-use developments in Delhi-NCR. It has evolved into a multi-asset developer, with a strong focus on design-led residential communities and institutional-grade office assets, aided by a solid execution track record and a robust Balance Sheet.

MAXESTAT is scaling its residential business through Phase II of Max Square, a strong launch pipeline in Q4FY26, and multiple upcoming projects in Noida and Gurugram. Its commercial annuity portfolio is set to expand significantly with a planned 4.5msf development pipeline. Asset-light JVs, disciplined capital allocation, and a net cash position offer meaningful flexibility for business development and execution. Commercial assets — Max House, Max Towers, and the upcoming Max Square 2 —strengthen its position as a premium office developer, backed by steady leasing traction, healthy collections, and steady progress across ongoing phases.

In H1FY26, it delivered strong pre-sales and maintained healthy collections, driven by rising demand for premium residential projects across the NCR. It advanced key initiatives, including land additions in Noida, design finalisation for upcoming luxury launches, and tenant traction across its office portfolio. With its annuity pipeline strengthening and visibility improving across new residential phases, MAXESTAT is well-positioned for sustained growth. The Balance Sheet remains a core strength, with strong operating cash flow visibility providing ample room for capex and future BD without additional leverage. The stock is not rated.

Key takeaways from the management interaction:

- **Launch pipeline is on track:** The management reaffirmed three major launches in H2FY26 — Estate 361 (Gurugram), Max One/Delhi One (Noida), and Sector 105 (Noida), with clear timelines, product positioning, and approval status. Most building plan approvals have been completed, with RERA filings in final stages.
- **High value launches to drive pre-sales:** Estate 361 (GDV: INR4,500cr), Max One (INR2,000cr, super-luxury, invitation-only), and Sector 105 (INR3,000cr, premium) projects together present a GDV of ~INR9,500cr, aiding its FY26 pre-sales guidance of INR6,000–6,500cr. The management said that this launch sequencing avoids cannibalisation.
- **Strengthening its future pipeline:** Its Sector 59 (GCE Road) project is heading for a H2FY27 launch. The focus is on disciplined phasing and near-term monetisation.
- **Strategic differentiators intact:** Antara's 10–13 years senior-living expertise is a moat, even as Max One reinforces its ultra-luxury credentials. The management expects project-led pricing power based on design, amenities, and client experience, not micro-market cycles.
- **Active BD momentum:** Around ~20msf is under evaluation, with a healthy deal flow. The management said it has achieved its FY26 BD targets.
- **Strong commercial portfolio:** All four operational assets have been completely leased, generating ~INR38cr in quarterly rentals (~INR150cr annualised), with a standard escalation of 15% every three years. Annuity is set to rise further in FY28–29 as new assets go live. It sees a long-term potential of over INR700cr from INR146cr in FY25.
- **Upcoming annuity additions:** Rental contributions from Max Square Two (~INR110cr) and Max District (~INR200cr) are expected after 12–18 months of leasing.
- **Pact with New York Life Insurance Company:** NYL acquired ~22%/~49% stake in the listed entity/commercial SPVs for ~USD200m. It co-invests in its annuity and mixed-use assets.
- **Capital deployment and margin:** From its envisaged FY26 capex of INR800cr/INR300–400cr in residential/commercial projects, it incurred INR250cr/INR175cr in Q2. It acquired land for INR64cr in its Sector 59 project. Underwriting is conservative at a margin of ~40% for outright deals and ~20% for JVs.

Valuation and view

At CMP of INR446, the stock trades at a P/E of 130x and an EV/EBITDA of 50.8x on a TTM basis.

Muthoot Microfin

nuvama professional clients group

We recently hosted the management of Muthoot Microfin (MUTHOOTM), the microfinance arm of the Muthoot Pappachan Group (MPG), also known as Blue Muthoot. It provides micro-loans mainly to women and follows the joint liability group (JLG) model. To ensure ease of access to customers, it has built its branch network in underserved rural areas, with a strong growth potential. The stock is not rated.

CMP: INR176
Rating: Not rated

Bloomberg:	MUTHOOTM:IN
52-week range (INR):	143 / 216
M-cap (INR cr):	2,998
Promoter holding (%)	56

Key takeaways from the management interaction:

- MUTHOOTM is moving towards a **multi-product lending model** from a traditional JLG one, with a rising share of individual loans and loans against property (LAP).
- **Individual loans/LAP range from INR1lk/INR5lk to INR5lk/INR10lk**.
- The MFI sector is recovering from a prolonged crisis triggered by lending growth following the lifting of COVID-related restrictions, stagnant borrower incomes, and inflation-driven repayment stress. Its total microfinance client base fell **to sub-7.5cr** from **8.2cr** due to the churn, leading to a leaner and more creditworthy borrower pool.
- Competitive intensity is declining due to liquidity issues at smaller players and banks' focus shifting away from microfinance, enabling the company to retain quality customers and increase yields modestly. Lending rates havr risen **to 24.9%/23% on JLG/individual loans** .
- The management views competition more as a market-share battle than a price war, expecting innovation and improved service to shape healthier portfolio mixes and stronger customer loyalty.
- Disbursements stood at **INR1,600cr in the first two months of Q3FY26.** It is forecasted to touch **INR2,600cr in Q3FY26**, marking a **10–15% quarterly growth**.
- The company is actively reducing its **cost of funds**, which fell **to 10.6% in H1FY26** from **11.02%.** Marginal cost of borrowing stood at **9.8%,** aided by tactical sourcing through pass-through certificates (**PTCs) priced at 8.6-8.8%** and further benefit expected from MCLR resets in Q2FY26. Hedging through ECB borrowing at subsidised rates is planned to reduce the cost of funds further.
- The NBFC is targeting a **net interest margin of 12.2–12.6% by FY26 end**, with a long-term goal of **13%** driven by longer tenor loans and improvements in its portfolio mix.
- Operating costs stood at **6.69% of AUM**, with plans to reduce it to **6.2–6.3% in FY26** and eventually to **5.5%**, aided by increasing AUM/branch **to over INR8cr** from **INR7.3cr**.
- Credit costs have fallen significantly **to 3.6%/4.3% in Q2/Q1FY26** from a peak of **9.4% in FY25.** With a half-yearly average of **4%**, it aims to keep credit cost below **4% in FY26**.
- Collection efficiency was robust at **99.8%. It collected INR41cr in arrears till November** compared to INR57cr in Q2FY26.
- Collection improvements are driven by calibrated underwriting, reduced customer leverage, and favourable rural economic factors including good monsoons, lower food inflation, festive cash flows, and government transfers. Geographically, collection efficiency increased notably in **Bihar, Uttar Pradesh, Kerala, and Tamil Nadu**, with stability in Karnataka aided by a unique **natural calamity insurance product**.
- The company employs a **selective approach to credit guarantee schemes**, applying for coverage on **15–30% of its portfolio**, thus balancing cost and risk.
- These improvements are expected to help achieve a **RoA of close to 2% by FY26 end** and a normalised **3.5–4% in FY27**.

Valuation and view

At the CMP of INR176, the stock is trading ~1.2x TTM P/BV. The stock is not rated.

Northern Arc Capital

nuvama professional clients group

We hosted the management of Northern Arc Capital (NORTHARC) on 2nd December, 2025. NORTHARC is a diversified, retail-focused financial services platform serving the credit needs of underserved households and businesses. Its model is built on two pillars: i) a high-yield D2C lending franchise across MSME, consumer, and rural segments, and ii) a credit-solutions business that funds NBFCs and enables structured placements through a network of over 200 institutional investors. It also manages debt portfolios via AIF and PMS platforms for HNIs, family offices, and institutions. Together, these verticals create an integrated credit ecosystem that connects borrowers with capital providers at scale. The stock is not rated.

CMP: INR255
Rating: Not Rated
Date: December 6, 2025

Bloomberg:	NORTHARC:IN
52-week range (INR):	154 / 290
M-cap (INR cr):	4,150
Promoter holding (%)	69.88

Pivot towards a high-yield direct-to-customer lending mix

- NORTHARC has continued to execute its strategic pivot towards secured retail lending (D2C) while building a differentiated multi-product credit ecosystem that combines lending, loan placement, fund management.
- Total AUM is ~INR14,000cr, with Direct-to-Customer (D2C) comprising ~55% (~INR7,600cr) and expected to reach 70% by FY28.
- Placement business is expected to scale to INR20,000cr next year, with fund AUM rising to ~INR3,800cr.
- Overall margins improving due to declining cost of funds, repricing benefits, and portfolio shift toward high-yield D2C lending.
- NIM expansion is expected to continue as incremental borrowing reprices lower, with further benefit from declining MCLR and DFI/offshore funding.
- Management remains focused on disciplined cost control and operating leverage, preserving profitability as scale increases.
- NORTHARC maintains tight risk discipline, reducing top 10 borrower exposure from 27% to below 10%, and single-party exposure from INR150–200 cr to below INR 100 cr.
- The portfolio is largely secured or backed by FLDG/CGFMU, even when underlying loans are unsecured.
- Microfinance risk has moderated with collections at 99.5%, accordingly credit cost has been trending down from 7% to ~5%, and is expected to fall below 5% by Q3.
- Overall asset quality strengthened by reduced concentration, heightened monitoring, scorecard-based underwriting, and guarantee schemes.
- Credit cost is expected to remain 2.6–2.8% this year, declining to 2.3–2.5% next year, reflecting portfolio cyclicality and improving new book performance.
- Company-wide ROA currently stands at ~2.7–2.8% and is targeted to reach ~3.7% over the medium term, supported by a higher D2C share, lower credit cost, strong fee income and operating leverage.
- Management sees NORTHARC evolving into a high-growth, fee-driven retail credit powerhouse, not just a lending NBFC, with differentiated capability and annuity income model.

Valuation and view

A higher-yield D2C mix, stronger margin, rising fee income, and controlled credit costs are expected to strengthen NORTHARC's earnings. With these drivers working together, along with better operating leverage, RoA is projected to improve meaningfully in the medium term. **At the CMP, the stock is trading ~1.2x P/ABV TTM. The stock is not rated.**

OBSC Perfection

nuvama professional clients group

We hosted OBSC Perfection (OBSCP) earlier this week. OBSCP is a precision metal component manufacturer offering a diversified suite of high-quality precision products. It has 24 products classified under four groups: i) shafts/rods (piston, torsion, rack bars, pinion, cut blanks, etc.); ii) components (housing brass aluminium, water-cooled injector, cable-end fittings, etc.); iii) cold forging (fork bolt, ball pin housing, connectors, etc.); and iv) investment casting (sensor boss, stop disc, housing, male-female ring, etc.). The automotive industry contributes 83% of group sales, with defence and marine each contributing around ~7% of group sales. Within defence, they supply outer shells to BEL. Marine business is entirely exports business with sales to Dometic. It has five manufacturing plants - four in Pune and one unit in Chennai; four plants dedicated to machining, one unit each for investment casting and forging. We forecast an EBITDA/PAT CAGR of ~40% between FY25-28e. We reiterate 'BUY' with TP of INR430.

CMP: INR329
TP: INR430
Rating: BUY

Bloomberg:	OBSC:IN
52-week range (INR):	360 / 145
M-cap (INR cr):	800
Promoter holding (%)	73.5

Key takeaways from the management interaction:

- OBSCP manufactures connecting rods, piston rods, pinions, etc. These parts are used along with other devices like steering, transmission, etc. It mainly forges stainless steel (~30%), steel (~30%), aluminium (~20%), and brass (~20%). It sources most of its raw materials from the parent company the Omega group.
- The management aims to diversify its revenue base. It is looking to expand non-automotive business contribution to ~35% (from current levels of ~15%). Gross margins break up: Defence: 40-45%, auto: 20-25%, marine: 70-80%.
- **Targets:** Management targets to increase its sales by INR30-40% to INR190-200cr, while maintaining EBITDA margin of around ~18% level. For mid-term (FY28E), company targets revenues of INR500cr with EBITDA margin of ~20-21%.
- **Orderbook:** Its orderbook stands at more than INR1,200cr, up from INR720cr in FY25 (Auto at INR986cr, defence at INR133cr and Marine at INR60cr). The incremental orders (vs FY25) have accrued from Automotive business. It expects to execute the above orders over the next five years, which will translate into annual sales of more than INR50cr.
- **Fund raise:** Company has raised fund of INR53cr on 17-Nov via preferential issue. We believe that the fund raise will be used to setup a new giga factory as company plans to bring the production under one roof. It rents out 4 plants in Pune. Consolidating them under same roof will lead to saving of rental expenses, logistics and overhead costs.
- **Forging:** OBSCP is adding a new forging line with commercial production expected to start from Q4FY26. The forging line will be used for both captive and external sales, but we haven't considered any external revenues from Forging business as we don't have much clarity on revenue segregation between captive and external usage
- **Exports:** Its main export markets are Europe/North America at 17%/4.8% of sales. The Marine business is entirely US based and it now attracts 50% tariffs. As of now, company is bearing 50% of incremental tariffs.

Valuation and View

We are positive on the equity story as we forecast new capacity additions, higher average realisation and improved product mix to drive >30% CAGR for sales over next three years. It has orderbook to support the above sales growth. Our forecast implies EBITDA/PAT to grow by 43%/39% CAGR between FY25-28e. Currently, the stock is trading at 26.5/18.6x FY27/28E P/E. We reiterate 'BUY' and maintain TP of INR430 (implying 24.4x FY28E P/E).

Oriana Power

nuvama professional clients group

We recently hosted the management of Oriana Power. Incorporated in 2013, ORIANA has grown into a diversified clean energy company, operating across multiple segments of the renewable energy ecosystem. What began with a focus on solar EPC, now spans rooftop, ground mounted, floating, and open access projects for industrial, commercial, and institutional clients. Over the years, it has expanded beyond solar into battery energy storage systems (BESS), compressed biogas, green ammonia, emerging synthetic fuels, and green hydrogen, aided by strong technical capabilities and strategic partnerships.

Its balanced and scalable model combines annuity-built revenue, via a renewable energy service company (RESCO), and build-own-operate-transfer (BOOT) arrangements with engineering, procurement, and construction (EPC)-based execution. With growing expertise across new energy technologies and a focus on digital systems and efficient project delivery, it is positioned as a key player in India's evolving clean energy landscape. The stock is not rated.

CMP: INR2159
Rating: Not Rated
Date: December 6, 2025

Bloomberg:	ORIANA:IN
52-week range (INR):	1,000 / 3,064
M-cap (INR cr):	5,239
Promoter holding (%)	58.00

Key takeaways from the management interaction:

- ORIANA is widening its presence across the green-energy ecosystem, adding BESS; compressed biogas; green hydrogen; green ammonia; synthetic fuels; and carbon capture, utilisation, and storage (CCUS) alongside its solar-led base.
- It has secured 30 acres for an integrated ammonia, e-methanol, and CCUS complex. It is also progressing on Solar Energy Corporation of India (SECI)-allocated capacities of 60,000mtpa of green ammonia and 10,000mtpa of green hydrogen.
- The management is in advanced discussions for a 100,000mtpa e-methanol JV in Egypt, with planned export channels to Japan and Europe.
- The energy-storage pipeline is scaling rapidly, targeting 2GWh by FY26 and 20GWh over the long term, aided by commercial and industrial (C&I) Energy-as-a-Service offerings and partnerships with the Ministry of New and Renewable Energy (MNRE), SECI, InvITs, and institutional funds.
- The management expects to capture 7–8% BESS market share and is increasing its focus on the C&I segment for higher-margin growth.
- Order book stands ~INR2,922cr, with ~INR8,650cr in the pipeline. Solar EPC execution stands at 550MW. Around 800MW of BESS projects are under implementation.
- It has signed 100MWh battery energy storage purchase agreements in Rajasthan and Tamil Nadu. It holds over 170MWh of C&I hybrid orders and expects 450MWh of awards.
- Performance over FY22–25 has been strong, with a revenue/EBITDA/PAT CAGR of 100%/ 163%/184% and EBITDA/PAT margin expansion to 24%/16%.
- ORIANA is targeting 2x growth over the next three years, backed by diversification across green energy verticals and rising contribution from BESS and hydrogen.

Valuation and view

At the CMP of INR2,159, the stock trades at a P/E of 19x and an EV/EBITDA of 12.7x on a TTM basis. The stock is not rated.

Piramal Finance

nuvama professional clients group

We recently hosted the management of Piramal Finance (PIRAMALF). It is one of India's largest NBFCs, known for its multi-product portfolio, sizeable assets under management, and strong technological capabilities. Over the last three years, it has shed its 'discontinued' legacy book (6% of total AUM but expected to be negligible by FY26 end). It has painstakingly built a new 'diversified' retail book (82% of AUM) and a 'granular' wholesale book (12%), with better guardrails and improved policy-based credit underwriting. The stock is not rated.

CMP: INR1,436
Rating: Not rated

Bloomberg:	PIRALFIN:IN
52-week range (INR):	1,235 / 1,785
M-cap (INR cr):	32,562
Promoter holding (%)	45

Key takeaways from the management interaction:

- The company has reorganised its wholesale and retail teams to sharply focus on distinct lending segments.
- Wholesale 2.0 now targets smaller ticket real estate and mid-market corporate loans, with average ticket sizes of INR70–80cr and tenures of around three years. It has shifted away from its earlier wholesale exposure of over INR1,000cr to select developers. This shift reduces concentration risk by capping exposure mostly below INR100cr.
- The focus is on mortgage lending, which constitutes ~70% of the retail portfolio and consists of home loans and loans against property (LAP). It plans to add gold loans soon.
- Unsecured loans constitute ~22% of the retail portfolio and cover unsecured salaried personal loans, business loans, microfinance, and digital loans via partnerships. It aims to grow its unsecured share to 25–30% as individual product cycles stabilise.
- The management targets a total retail AUM of INR1.5lk cr by FY28 from INR90,000cr, with retail comprising 80–85% of total AUM and legacy wholesale assets fully run down.
- It is aiming for 3% RoA by FY28, up from 1.5% excluding one-off recoveries, led by expected growth in retail fees and operational efficiency.
- Legacy asset recoveries from wholesale 1.0 have exceeded estimates, with INR3,000cr initially expected but has nearly double recovered.
- The wholesale legacy portfolio of ~INR5,500cr will reduce to ~INR3,000cr in FY26, via repayments and write-offs, thus avoiding any significant impact on net worth.
- Provisions of ~INR400cr are in place against identified legacy exposures, smoothing the P&L-related volatility seen in prior years. The goal is to fully resolve these legacy wholesale assets by 2028, enabling a cleaner Balance Sheet to aid growth.
- On capital efficiency, the management expects early double-digit RoE (~13%) by FY28, with a capital structure optimised by then.
- Leverage is set to rise to 4x from 2.6x. This, along with a 3% RoA, should aid consistent RoE in the 12–14% range.
- The management is cautiously factoring in legacy asset impacts and credit costs, which reduce potential RoE from a theoretical 15% to a more conservative target.
- Risk is managed at the product level, with vintage risk charts tracking quarterly origination cohorts live, allowing early identification of emerging stress trends.
- Centralised decision-making removes branch-level discretion, enforcing automated loan approvals or rejections via digital scorecards and personal due diligence (PD) visits. Collections are aided by a hybrid model, combining ground teams and AI-driven digital reminders, to maximise timely recoveries.
- The approach balances automated controls with human oversight, aiming to maintain stable credit costs, net NPA near 1.8%, and consistent underwriting standards.

Valuation and view

At the CMP of INR1,436 the stock is trading ~1.2x TTM P/BV. The stock is not rated.

Pondy Oxides & Chemicals

nuvama professional clients group

We recently hosted the management of Pondy Oxides & Chemicals (POCL), one of India's premier non-ferrous metal recyclers. It commands a strong position in lead and lead alloys while expanding meaningfully in copper. It is targeting over 15%/20% volume/revenue CAGR, a blended EBITDA margin above 8% by 2030, and a consistent RoCE of more than 20%. This will be driven by substantial capacity expansions and a strategic focus on shifting its revenue mix toward higher-margin value-added products and technology-driven operational efficiencies at its flagship Thervoykandigai facility. This stock is not rated.

CMP: INR1,300
Rating: Not Rated
Date: December 06, 2025

Bloomberg:	POCL:IN
52-week range (INR):	1,507 / 490
M-cap (INR cr):	3,967
Promoter holding (%)	39.34

Key takeaways from the management interaction:

- Imports constituted ~77% of lead procurement in FY25, primarily through diverse dealer and aggregator-driven sourcing from Southeast Asia, North and South America, Europe, and the Middle East. The management said imported scrap is the most cost-effective.
- In FY25, exports contributed ~66% to total revenue. It exports to Southeast Asian markets such as Japan, South Korea, Indonesia, and Malaysia, each forming 15–20%.
- Extended Producer Responsibility (EPR) rules are expected to be extended to other non-ferrous metals such as copper, aluminium, and zinc by FY27, which should improve domestic scrap availability and formalise the recycling ecosystem.
- Phase II of the new high-efficiency plant will start contributing to revenue by Q4FY26, with trial runs in progress. Once fully operational, total lead recycling capacity will rise to 2,04,000mt. Phase I, which commenced operations in Q1FY26, is delivering improved margin. The entire facility is expected to enhance lead recycling margin by 1–1.5%.
- As part of its diversification strategy, the management is scaling up its copper recycling capacity. It expects copper to contribute ~40% to total revenue in the next two fiscals.
- By Q2FY27, its finished copper product capacity will reach 12,000mt, with overall copper recycling capacity set to double to 6,000mt. The copper expansion project involves a capex of INR50–75cr.
- Following this scale-up and a greater focus on value-added products, margin in the copper segment is expected to improve to 5.5–6% from 4–4.5%.
- The aluminium recycling business is expected to stay small due to challenges with effective hedging and working capital management.
- Revenue from plastic recycling is consequential to battery recycling activity and is expected to grow in line with the increase in lead production.
- The management said it will take a few more years before lithium-ion battery scrap becomes available in meaningful quantities for recycling. Although it has been conducting R&D in this area for the past two years, it prefers to wait for the technology to mature before making a significant move into this space.
- It expects revenue to grow by more than 20% in FY26. Steady state margin in the lead business is expected to be 7–7.5% while FY26 margin may be higher due to a greater proportion of value-added products in the overall revenue mix.
- It delivered a strong margin in H1FY26 due to a higher proportion of value-added products and operational efficiencies from the new plant. The management aims to achieve a 60–70% share of value-added products across all segments.

Valuation and view

At the CMP of INR1,345, the stock trades at 41.7x P/E and 17.5x EV/EBITDA on a TTM basis. The stock is not rated.

Prizor Viztech

nuvama professional clients group

We recently hosted the management of Prizor Viztech (PRIZOR). Established in 2017, PRIZOR has transitioned from a niche CCTV assembler into a vertically integrated security and surveillance products manufacturer. Its Gandhinagar facility has an annual capacity of 50lk cameras. It serves more than 20 states through a network of over 9,000 dealers and 40 regional distributors. It also offers AI-driven CCTV solutions, LED TVs, monitors, and interactive panels. The stock is not rated.

CMP: INR263
Rating: Not Rated
Date: December 6, 2025

Bloomberg:	PRIZOR:IN
52-week range (INR):	105 / 362
M-cap (INR cr):	281
Promoter holding (%)	68.60

Key takeaways from the management interaction:

- The promoters have over a decade of industry experience, having previously worked in global and domestic CCTV companies before founding PRIZOR in 2017.
- It employs ~12 people in R&D, along with third-party partners in Taiwan and India. In R&D, it undertakes product development and system-on-chip (SOC)-based innovation.
- It has diversified its sourcing of components (lens, screw, pillar, etc.) across Taiwan, Korea, and India. It manufactures housings, moulds, and several mechanical components in-house while sourcing certain electronic components from abroad.
- The management attributed the decline in the market share of Chinese brands to the Bureau of Indian Standards (BIS), Standardisation Testing and Quality Certification (STQC), and import restrictions. PRIZOR's dealer network has grown in line with this trend and now comprises over 9,000 dealers and 40 regional distributors across 20 states.
- The company has an annual semi-finished goods capacity of 50lk units. Utilisation stands at 10–15% in a single shift, or ~5lk units annually. The management targets ~90% utilisation within the next four years on a single shift.
- With double shifts, semi-finished capacity can rise to 1cr units. The management feels its existing infrastructure is sufficient for the next five to seven years without major expansion.
- Finished goods (assembly) capacity stands at 12lk units annually, with current utilisation of ~10lk units. Capacity expansion for assembly requires minimal additional investment, mainly in manpower and basic tooling.
- The management does not expect EBITDA margin to expand meaningfully beyond 20–25% as competing with Chinese manufacturers on cost is structurally difficult given their enormous production scale and deeper component ecosystems.
- Diversification into LED TVs, monitors, interactive panels, and technical services (installation and repair) is scaling well, with a 106%/160% YoY growth in LED TVs and touch panels/installation and services in FY25.
- PRIZOR maintains a diversified vendor ecosystem across multiple geographies to avoid reliance on any single supplier, sourcing components and SOCs wherever commercial terms are the most favourable. As global SOC supply is the only major structural bottleneck, it plans to maintain at least three months of inventory and rotate it cyclically to ensure uninterrupted production.
- The management expects 60–70% revenue growth, backed by strong demand visibility. It aims to scale to 25–28lk units over the next two years. It highlighted that the Indian CCTV and security industry is expected to potentially double by FY29–30, providing a favourable growth backdrop.
- PRIZOR reiterated its long-term ambition to be among India's top five CCTV brands, aided by STQC certification (which it has applied for) and expanding dealer coverage.

Valuation and view

Rapid scale-up in production, expanding dealer network, and strong demand visibility position PRIZOR favourably for sustained growth. At the CMP of INR267, the stock trades at a P/E of 24.2x on a TTM basis. The stock is not rated.

Prostarm Info Systems

nuvama professional clients group

We recently hosted the management of Prostarm Info Systems. Incorporated in 2008, PROSTARM leverages its expertise in electronics to design, manufacture, assemble, sell, service, and supply energy storage and power conditioning equipment in India. It offers customised and standard products under its own brand. It evolved from a battery and UPS business into a comprehensive power solutions provider, catering to critical sectors such as healthcare, banking, aviation, defence, education, railways, IT, and renewable energy. Its offerings are bolstered by a pan-India sales and service network. It is empanelled with leading government bodies. Its strong client relationships are built on innovation and reliability. Recently, it expanded into battery energy storage systems (BESS) via its upcoming 1.2GWh plant in Jhajjar (Haryana), providing large-scale storage solutions for commercial, industrial, and utility-scale applications. The stock is not rated.

CMP: INR189
Rating: Not Rated
Date: December 6, 2025

Bloomberg:	PROSTARM:IN
52-week range (INR):	253/107
M-cap (INR cr):	1,062
Promoter holding (%)	72.82

Key takeaways from the management interaction:

- Its multi-channel sales model includes tenders, project contracts, institutional enquiries, dealer distributor channels, and white label supplies to UPS and solar inverter OEMs.
- The order book of ~INR1,100cr is largely driven by BESS projects (~INR900cr) from: i) Bihar (120MWh), ii) Karnataka (300MWh), and iii) Adani Electricity Mumbai (22MWh).
- Though the current mix is heavily skewed towards renewable energy projects, it expects rising traction from commercial and industrial segments as execution ramps up.
- These orders are executable in ~18 months but the management aims to complete them in six months.
- PROSTARM has seen an uptick of ~5x in the number of bids for BESS tenders in the past six months. It believes that many applicants lack the necessary technical knowledge and sourcing experience, making execution challenges likely for a large portion of entrants.
- Though bid eligibility is determined mainly by financial criteria, the management expects technical requirements to be announced soon, an area where it has a strong advantage.
- The 1.2GWh BESS facility at Reliance MET, Jhajjar, is progressing as planned. Designed to run on a single shift, it will support advanced infrastructure needs and high-end assembly warehousing. The project involves a capex of ~INR25cr, with an additional INR15–20cr planned for future expansion. The plant is expected to be commissioned by FY26 end and will serve commercial, industrial, and utility scale storage requirements.
- Once fully commissioned and after the planned capex is deployed, the facility is expected to contribute ~INR1,000cr to annual revenue.
- PROSTARM imports its BESS solutions from China. But once the Jhajjar facility turns operational, most of the assembly and integration work will be carried out locally, excluding lithium cell manufacturing. The management plans to progressively backward integrate over FY27 to reduce its sourcing dependency and enhance its margin profile.
- Compared with generator sets, BESS is increasingly preferred as it is ~25% cheaper when it is well designed and the total cost of ownership is calculated over a 10–15 year lifespan. It also requires significantly less space.
- The management has noticed a gap with lithium prices rising, but BESS prices have yet to catch up in the past few months.

Valuation and view

At the CMP of INR180, the stock trades at 45x P/E and 27.3x EV/EBITDA on a TTM basis. The stock is not rated.

Saakshi Medtech & Panels

nuvama professional clients group

We recently hosted the management of Saakshi Medtech & Panels (SAAKSHI), a multifaceted and diversified manufacturing company. It delivers a wide array of high-quality and specialised products that are designed to serve various industries. Incorporated in 2009, it operates in four segments: i) electrical control panels and cabinets (ECP, ~57% of H1FY26 revenue); ii) medical x-ray systems (~2%); iii) fabrication (~37%); and iv) wiring harness and others (~4%). The stock is not rated.

CMP: INR197
Rating: Not Rated
Date: December 7, 2025

Bloomberg:	SAAKSHI:IN
52-week range (INR):	118 / 255
M-cap (INR cr):	347
Promoter holding (%)	73.89

Key takeaways from the management interaction:

- Headquartered in Pune, the company operates three dedicated factories aligned to its three verticals — medical equipment manufacturing, ECP, and fabrication.
- The business largely follows an OEM-based model, with five to six major clients in each vertical. It is now moving into project-based opportunities, where margins are superior.
- Revenue mix stands ~65% from ECP, 25–30% from fabrication, and the balance from new development areas. Margin profile is the highest in aerospace, followed by medical equipment, and ECP.
- SAAKSHI caters to multiple industrial segments, including wind turbine panels for GE Renewables, Adani Wind, and Envision Energy; compressor electrical systems for Atlas Copco; elevator panels; and EV charging protection systems for Mahindra & Mahindra.
- It undertakes mechanical assembly work for Wabtec, a key client, and has set up a radiator manufacturing facility for them. Wabtec's UK business is set to transition to the Indian entity as the designs have been approved. This will be beneficial for SAAKSHI.
- A significant revenue drop occurred in FY25, when GE Vernova, a significant contributor to SAAKSHI's revenue, halted business amid its restructuring. GE Vernova's Pune facility is ready, and approvals are expected by March 2026. The management expects revenue contribution to resume in H2FY27. By that time, Wabtec and other businesses are expected to scale up.
- In aerospace, it has received approvals from GE Aerospace and Godrej Aerospace. Approvals from another OEM are under assessment. The management expects exponential growth in this division as aerospace is labour-intensive with a high margin.
- A major opportunity is likely over the next two years from LEAP engine work with GE Aerospace and in similar programmes where Godrej Aerospace is also active.
- Debt has increased due to the recent capex, with margin expected to improve as scale builds, especially from the aerospace and radiator portfolios.
- Existing capacities run mostly on a single shift. Productivity will rise as new facilities ramp up. A single shift at the old facility generates ~INR120cr in revenue. Once the new facility is fully commissioned, it will add significant capacity across ECP and the fabrication business.
- The overall revenue potential from existing and upcoming facilities is pegged ~INR500cr at a stable margin.

Valuation and view

Revenue/EBITDA/PAT grew 32%/83%/133% YoY to INR58cr/INR11cr/INR7cr in H1FY26. At the CMP of INR197, the stock trades at a P/E of 44x and an EV/EBITDA of 24.5x on a TTM basis. The stock is not rated.

Safe Enterprises Retail Fixtures

nuvama professional clients group

We recently hosted the management of Safe Enterprises Retail Fixtures (SAFEENTP), one of the leading providers of retail fixtures and in-store solutions. It offers end-to-end services from concept and design to manufacturing and installation. With over 30 years of experience and proprietary INSYNC modular shop-fitting systems, it serves fashion, electronics, department stores, and QSR clients, enabling modern, experiential, and tech-integrated store environments globally. Recent expansions in Pune, Mumbai, and the upcoming Ambernath facility, along with advanced automation systems, well position it to scale efficiently in India's rapidly formalising retail landscape. The stock is not rated.

CMP: INR 276
Rating: Not Rated
Date: December 7, 2025

Bloomberg:	SAFEENTP:IN
52-week range (INR):	319 / 151
M-cap (INR cr):	1,287
Promoter holding (%)	70.07

Key takeaways from the management interaction:

- India's organised retail sector is entering a strong expansion phase, aided by higher consumer spending, omnichannel adoption, and accelerated store rollouts across fashion, electronics, QSR, and lifestyle categories. As per industry data the retail market is projected to touch USD1.6trn by 2030, with organised retail rising to 17% from 12%. These structural trends offer a strong multi-year tailwind for SAFEENTP's growth.
- The company is positioned as an integrated retail fixtures partner offering end-to-end capabilities from concept design and prototyping to manufacturing, installation, and after-sales service. This end-to-end 'design-to-installation' model enhances client stickiness and aids long-term recurring business from national and multinational retailers.
- It has significantly enhanced its manufacturing capability following the 46,505 sq. ft. expansion of its Pune plant. Following its IPO, it began developing its integrated Ambernath facility, which is still under construction. In the interim, it has added two additional units in Mumbai and doubled capacity in Pune to meet rising demand. This expanded infrastructure provides sufficient headroom until the Ambernath plant turns operational.
- Sharing its medium-term visibility on growth, the management said it is targeting INR400cr/INR100cr in FY28 revenue/PAT, aided by capacity expansion, stronger execution capabilities, and sustained demand from organised retail rollouts.
- Retail stores typically undergo a makeover every three to four years, forming a regular refresh cycle for brands. This creates recurring demand for fixture upgrades and redesign work, resulting in repeat business for SAFEENTP across existing clients.
- It has created a franchise-style model with five international channel partners. Here, the partners use the SAFE brand, replicate its experience centre format, and independently build stores in their respective markets. This is not a revenue-sharing arrangement. Instead, partners procure components at list prices and operate the centres as their own outlets. The management said the expansion of this franchise-led international model will be scaled up once the company achieves INR400cr in combined revenue.
- SAFEENTP is increasingly supporting experiential formats, incorporating LED integrations, digital signage, smart lighting, interactive elements, and integrated electronics.
- Its long-term presence and deep domain knowledge in retail fixtures provide a significant competitive advantage in project execution and client retention.
- The management said capacity additions in Pune and Ambernath, coupled with automation, will aid the next leg of growth and enable SAFEENTP to execute larger turnkey mandates.

Valuation and view

At the CMP of INR276, the stock trades at a 23.2x P/E and 16.3x EV/EBITDA on a TTM basis. The stock is not rated.

Sanathan Textiles

nuvama professional clients group

We recently hosted the management of Sanathan Textiles (SANATHAN), a diversified and integrated yarn manufacturer. It caters to clients globally, with polyester filament/cotton/ technical textile yarns contributing 77%/19%/4% to total revenue. Its polyester filament share is set to rise to 81–82%. Its yarn serves multiple end-use industries, including automotive, healthcare, construction, sports and outdoor, and protective clothing. Total installed capacity has risen to 4,79,250mtpa from 2,23,000mtpa in Silvassa, following the commissioning of a greenfield facility. Its new plant in Punjab, which commenced operations at 350mt/day in Q2FY26, will ramp up to 700mt/day. Promoters Mr Paresh Dattani (Chairman & MD), Mr Ajay Dattani (Joint MD), Mr Anil Dattani (Executive Director), and Mr Sammir Dattani (Executive Director) bring over two decades of textile industry experience. The stock is not rated.

CMP: INR458
Rating: Not rated
Date: December 6, 2025

Bloomberg:	SANATHAN
52-week range (INR):	287 / 564
M-cap (INR cr):	3,869
Promoter holding (%)	78.58

Key takeaways from the management interaction:

- With an installed capacity of 4,79,000mtpa, SANATHAN has emerged as a large player in a relatively consolidated domestic market, dominated by eight key manufacturers which command an 85% share.
- Unlike high-volume competitors, SANATHAN differentiates itself by focusing on value-added, higher-margin yarns, with enhanced functionality and pricing power.
- The company is expanding capacity through a greenfield cotton yarn facility in Madhya Pradesh. With 73,000 spindles, at a capex of INR420-445cr, the facility is targeted for commissioning in Q1FY28, with an expected revenue of INR450–500cr.
- Phase II of the Punjab plant expansion will raise capacity to 900mt/day by FY27 end from 700mt/day, at a capex of INR150cr.
- The Punjab facility will structurally improve margin by 4–5% due to lower (3–4%) production costs, stemming from cheaper power, heating costs, and labour; reduced freight costs due to proximity to customers; and state incentives. Hence, EBITDA/ton for polyester yarns in Silvassa/ Punjab is INR9,000–9,500/15,000–15,5000.
- SANATHAN has signed a 15-year supply MoU with Indian Oil Corporation's Panipat refinery, creating an ecosystem where raw material, manufacturing, and supply are all local.
- The management expects its effective tax rate to stabilise ~15%, aided by the 7.25% concessional rate applicable to the Punjab facility.
- EBITDA growth over FY25–28 will be driven by rising volumes as new capacities scale up. It has guided at a normalised EBITDA margin of 10–12% and a steady-state RoCE of ~18% once full capacity is achieved in FY28.
- In H1FY26, revenue grew 3% YoY to INR1,563cr, while EBITDA/PAT fell 1%/27% to INR133cr/ INR61cr, impacted by a start-up cost of INR11cr from the Punjab facility.
- Production rose 10% YoY to 1.26lk mtpa, with sales stable at 1.2lk mtpa in H1FY26.
- The management guided at a revenue of INR4,100–4,300cr/INR5,800–6,000cr/INR7,300–7,400cr in FY26/FY27/FY28, with an EBITDA margin of 10%/11%/12%.

Valuation and view

SANATHAN is entering a scale-up phase with large capacity additions, a growing presence in value-added yarns, and structural cost advantages from its new Punjab facility. With upcoming expansions in Madhya Pradesh and Phase II at Punjab, along with margin tailwinds and strong client retention, it is well-positioned for multi-year growth in revenue and profitability. The stock trades at 29x P/E on a trailing 12-month basis. The stock is not rated.

Shree Refrigerations

nuvama professional clients group

We recently hosted the management of Shree Refrigerations. SHREEREF is a specialised manufacturer of refrigeration and heating, ventilation, and air conditioning (HVAC) systems, primarily serving India's defence, marine, and industrial sectors. It is the only Indian entity to secure all three marine-related registrations — refrigeration and chiller plants, turnkey HVAC and refrigeration solutions, and electrical control panels — for defence and marine applications. It operates a modern, ISO 9001:2015-certified facility in Karad (Maharashtra), which has integrated manufacturing processes like computer numerical control (CNC) fabrication, custom heat exchanger production, Navy-approved electrical control panels, and advanced testing facilities. Its order book stands at INR328cr as of H1FY26, over 3x its FY25 revenue. The stock is not rated.

CMP: INR207
Rating: Not Rated
Date: December 06, 2025

Bloomberg:	SHREEREF:IN
52-week range (INR):	312 / 153
M-cap (INR cr):	736
Promoter holding (%)	44.60

Key takeaways from the management interaction:

- Revenue is concentrated, with its top customer contributing ~41%. Its top five clients accounted for ~82% of FY25 revenue, even as the government sector contributed ~77%.
- Its FY25 revenue was dominated by marine clientele (83.9%), followed by other chillers (5.3%), fabrications (4.1%), and others (~6.8%).
- The company is close to securing four significant projects in addition to its strong order book of INR328cr.
- It has been receiving inquiries from private players for data centre cooling solutions. The management believes this can emerge as a major opportunity, especially with potential government support, and help it diversify into non-marine projects.
- In a typical data centre, HVAC accounts for 10–12% of total project cost. The cooling technology used is Computer Room Air Handler (CRAH), an area SHREEREF has been working on for the past five years. The management expects revenue from data centre projects to accrue in FY27.
- SHREEREF's focus is on domestic opportunities. It is not pursuing overseas projects, noting that the domestic market offers sufficient room for growth.
- It is among the very few companies with controlled-ambient AC and HVAC testing capabilities. It also serves as the testing partner for major refrigeration appliance makers.
- Its greenfield facility spanning with a capex of INR40–45cr will commence in FY27. This will result in a incremental revenue potential of ~INR200-250 at 6x asset turnover, taking the total revenue potential to ~INR450-500cr. The management expects the new facility to significantly enhance production capabilities and reduce the working capital cycle.
- Government approvals for new shipbuilding projects total ~INR1.6lk cr, of which HVAC and AC systems account for ~INR1,500cr, representing its total addressable market. The management is confident of capturing ~30% of this opportunity.
- It has guided at 40–50% revenue CAGR, with an EBITDA margin of ~22%, over the next few years. It targets a revenue of INR1,000cr in six to eight years.
- The management anticipates robust revenue growth and recognition in H2FY26 as large HVAC and defence projects transition from execution to billing.
- It has been working towards reducing its working capital cycle. It is aiming at less than 400 days by FY26 end.
- Over the years, SHREEREF has improved its order fulfilment time to three months from six months by focusing on integration and efficiency.

Valuation and view

At the CMP of INR207, the stock trades at 92x TTM P/E. The stock is not rated.

Shubhshree Biofuels Energy

nuvama professional clients group

We recently hosted the management of Shubhshree Biofuels Energy (SHUBHSHREE), one of India's largest biomass fuel manufacturers. It converts agricultural residue (paddy straw, cane waste, mustard husk, etc.) into briquettes and pellets. It operates plants across Rajasthan, Madhya Pradesh, Chhattisgarh, and Haryana, catering to industrial clients and power plants. Biomass pellets are used as a substitute for coal, aided by government mandates and the growing focus on mitigating pollution. The stock is not rated.

CMP: INR398
Rating: Not Rated
Date: December 6, 2025

Bloomberg:	SHUBHSHR:IN
52-week range (INR):	269 / 495
M-cap (INR cr):	209
Promoter holding (%)	73.58

Key takeaways from the management interaction:

- Shubhshree converts agricultural waste (paddy, cotton, bagasse, mustard, sugarcane waste, etc.) into pellets, which are used as a substitute for coal and gas. Pellets are used to reduce pollution and improve farmers' income. Its clients include private industrial users (PepsiCo India Holdings Pvt, Hindustan Coca-Cola Beverages Pvt, Hero MotoCorp, Dabur India, Hindustan Unilever, and players in the pharma and textile sectors) and government power plants.
- The government has mandated 5% biomass pellet blending for coal-based thermal plants (7% for certain categories), with a roadmap to raise this to 10% and an eventual long-term target of 30%. While implementation is low (0.02–0.03%) due to limited infrastructure, the management said this gap underscores the significant multi-year growth potential as biomass handling and processing infrastructure expands across India.
- The daily biomass requirement is ~2lk tonne as against a supply of ~5,000t, highlighting the massive demand–supply gap and the long runway for capacity expansion.
- Industry mix is shifting from industrial to power plants. Previously, 70%/30% of sales were to industrial/power plants. The contribution of power plants is rising due to larger tender sizes.
- Competition is largely unorganised, with 70–80 small vendors. SHUBHSHR is among the largest organised players. The management claims it commands ~15% market share of total India capacity.
- Shubhshree reported a revenue of INR163cr/INR96cr in FY25/H1FY26. The management expects to close FY26/FY27 with a revenue of ~INR220cr/~INR320cr, aided by a power plant order book of ~INR200cr, excluding short-cycle industrial orders.
- Four new plants have been commissioned, with two (Chhattisgarh and Madhya Pradesh) already operating. Plants are set up on 10-year rental models to reduce upfront capex and are strategically located near raw material hubs and key power plants. For instance, its MP unit is situated ~20km from NTPC Super Thermal Power Station, Gadarwara. New plants typically take three to four months to establish, with a capex of INR1.5–2.5cr depending on crop type (mustard versus paddy straw).
- Shubhshree operates at a capacity of ~450tpd and supplements the shortfall with trading. The management plans to scale to ~1,000tpd within a year via new plants, backed by rising orders from power plants and industries.
- Manufacturing margins are at 10–15% versus ~5% in trading. Due to limited biomass infrastructure, ~80%/~20% of its revenue accrues from trading/manufacturing. As infrastructure develops and its share of manufacturing rises, overall margin is expected to improve meaningfully.

Valuation and view

With the domestic biomass fuel market expected to grow 9x (to INR40,000cr) by 2035, Shubhshree's disciplined execution and cost-efficient sourcing position it well for long-term value creation. At the CMP of INR400, the stock trades at a P/E of 25.9x and an EV/EBITDA of 19.7x on a TTM basis. The stock is not rated.

Simplex Casting

nuvama professional clients group

We recently hosted the management of Simplex Casting. Six decades old SMPX is engaged in the manufacturing of heavy engineered castings. It is a fully backward integrated, offering integrated heavy engineering solutions to clients. Its manufacturing facilities consist of a cast iron foundry and a heavy engineering and fabrication plant all under one roof. SMPX products cater to various sectors such as steel, railways, power, mining, cement, shipbuilding, oil and gas, defence, etc. It is fully backward integrated. Some of its main clients include Steel Authority of India (SAIL), Indian Railways, the Ministry of Defence, the Godrej Group, Jindal Steel & Power, Tata Steel, Siemens, and Nippon Steel India.

It operates a heavy engineering/fabrication plant with a capacity of 21,000mtpa/15,000mtpa. As part of its expansion — Simplex 2.0, it plans to foray into the high value precision casting and heavy fabrication business. This will enable strategic diversification into defence, railways, and marine sectors. It is targeting a FY25–28 sales CAGR of 40–50% while maintaining a 10% PAT margin. The stock is trading at a TTM P/E ratio of 21.1x. The stock is not rated.

CMP: INR548
Not Rated
Date: December 6, 2025

Bloomberg:	Simplex: IN
52-week range (INR):	598 / 190
M-cap (INR cr):	446
Promoter holding (%)	53.1

Key takeaways from the management interaction:

- SMPX is a well-established casting and heavy engineering player with more than six decades of experience. It is managed by the third generation of the family. All employees are mainly from the second or third generation of their families. Its plants are in Bhilai and Rajnandgaon districts of Chhattisgarh, one of India's most mineral-rich regions, which provides it advantages in procurement and logistics.
- **Company is the world's largest coke oven door manufacturer.** A coke oven door is a sealed, refractory-lined metal door. It is used in heating furnaces. The main idea is to prevent gas leakages and maintain the intense heating within the furnace. The management said that ~90% of coke oven doors in India have been supplied by SMPX. Globally, China Steel Corporation is one of the largest coke oven door manufacturers.
- **Financial targets:** The management is aiming at 40–50% sales CAGR over the next three years while expanding its PAT margin to ~10% from ~8.5%. It is eyeing a railways/defence contribution of ~40%/10–12% in FY28 from 20%/sub-10% in FY25. The above sales growth is driven by the company's revamped strategy named **Simplex 2.0.**
- **Simplex 2.0:** From a legacy steel and casting player, SMPX aims to venture into the high-value casting and machining business, expanding into railways and the defence segment.
- In railways, it is venturing into fabricated and cast bogies, including components. While casting bogies will start generating revenue from Q4FY26, fabricated bogies are in the development and testing phase and will generate revenue from FY27.
- In defence, it has received some shipbuilding orders. It is also in active discussions for the 155mm towed howitzer Dhanush with Gun Carriage Factory, Jabalpur.
- In power, it has received an order from Bharat Heavy Electricals (BHEL)/L&T Power for fabrication of 2,000t/6–8lk tonne.
- **Road to INR500cr:** Management expects additional incremental sales of INR100cr from the fabricated and casting business of the Indian Railways. It has received an INR20cr order from BHEL. Additional business from L&T Power is expected to add a revenue of INR30cr. The company is looking at inorganic opportunities to increase sales to INR500cr.
- **Investments:** It will be investing INR30–35cr in the railway casting business and INR20–25cr on solar power over the next three years. Investment needs in the fabricated business are minimal. SMPX is targeting solar power of 5MWh, which will lead to power savings.
- **Restructuring in FY19:** Sales/order book stood at INR200–225cr/INR300cr in FY19. This included the Urla plant which had a turnover of INR100–150cr. In FY19, it hived off the Urla unit as the State Bank of India had classified the engineering sector as negative. Being an engineering company, SMPX couldn't get the sanctioned working capital loans. After restructuring, its debt fell to INR55cr from INR135cr in FY19.

Sri Lotus Developers & Realty

nuvama professional clients group

We recently hosted the management of Sri Lotus Developers & Realty. LOTUSDEV is a premium Mumbai-focused real estate platform, with a growing presence across luxury and ultra-luxury residential redevelopment, design-led mixed-use developments, and boutique commercial assets. It operates almost entirely through society redevelopment and asset-light joint development models, allowing it to scale rapidly across supply-constrained micro-markets such as Juhu, Andheri, Versova, Worli, Prabhadevi, Ghatkopar, Bandra, and Nepean Sea Road.

With four completed projects and five ongoing developments, it has established a strong reputation for high-quality execution, consistent ahead-of-schedule delivery, and deep customer trust in the city's luxury segment. Aided by an in-house construction setup, it delivered its last four projects 18–20 months ahead of RERA timelines, strengthening its premium positioning, and enabling 20–22% pricing premiums across key micro-locations.

In H1FY26, LOTUSDEV added five projects, with a combined GDV of INR4,000-4,500cr, taking its ongoing development portfolio to 2.6msf. Execution progressed well across five residential projects, with Arc One and Ayana seeing strong traction after receiving an OC. Pre-sales were healthy at INR175cr in H1 (INR106cr in Q2FY26), aided by strong absorption at Ananya (87% pre-sold) and steady progress at Arc One (56%).

The management reiterated that Mumbai's premium luxury market is structurally strong, driven by branded developers, its differentiated product quality, and limited redevelopment supply. The Balance Sheet stands strong with INR850cr in cash and zero net debt. Its ongoing and near-term launches are fully funded through internal accruals. The stock is not rated.

Key takeaways from the management interaction:

- **Luxury and ultra-luxury focus:** Its strong positioning in the luxury and ultra-luxury segment has been driven by superior product quality and a niche, premium-paying client base, resulting in one of the highest realisations in the market. Premium build-to-sell commercial projects are seeing healthy demand.
- **Financial strength:** Margin is structurally strong due to negligible marketing spends. LOTUSDEV is net debt-free, follows an asset-light model, and maintains high RoE. The management is targeting more than 20% annual growth over the next three years.
- **FY26 guidance**: It has guided at a pre-sales of INR1,100–1,300cr (H1: INR310cr), aided by six ongoing projects; and a revenue of INR960–1,000cr (H1: INR237cr). The management is confident of achieving its targets due to strong inquiries and four project launches planned in the next six months.
- The luxury real estate segment is performing strongly in western suburbs, mid-Mumbai, and South Mumbai. The focus is on quality over quantity through selective redevelopment, with two to three new projects planned in H2FY26.
- Arcadian/Amalfi have seen initial bookings of INR92cr/INR38cr.
- **Operational strengths:** Fast execution and a strong business development team support pipeline execution. Key advantages in redevelopment include its extensive experience, ultra-luxury positioning, prestigious clientele, and prioritising societies as top clients.

Valuation and view

Its selective, high-yield luxury and redevelopment projects; strong financial discipline; asset-light model; and growing presence in Mumbai's luxury market position it well to capture increased market share. At the CMP of INR157, the stock trades at a P/E of 34.4x and an EV/EBITDA of 22x on a TTM basis. The stock is not rated.

String Metaverse

nuvama professional clients group

We recently hosted the management of String Metaverse. META is a Web3 company, operating at the intersection of blockchain gaming and digital advisory. Its focus is on redefining digital ownership, monetising user attention, and opening new financial pathways in the blockchain ecosystem. Its gaming division builds free to play Web3 titles where users can convert their time into digital assets, backed by on-chain frameworks that ensure genuine asset ownership and reward participation.

On the advisory side, it provides liquidity provision and market-making across blockchain networks, enabling deeper markets and improved trading efficiency. It is also developing a Bitcoin-led treasury strategy to enhance long-term asset value and yield generation. META supports emerging Web3 projects through tokenomics guidance, community building, and launch enablement, positioning itself as a comprehensive ecosystem partner in a decentralised economy. The stock is not rated.

CMP: INR261
Rating: Not Rated
Date: December 6, 2025

Bloomberg:	META:IN
52-week range (INR):	19 / 324
M-cap (INR cr):	3,064
Promoter holding (%)	81.8

Key takeaways from the management interaction:

- Its casual gaming platforms — String Arcade and String SpinWin — are scaling rapidly, crossing 11lk users within four months of its launch, even as IdleMine exceeded 10lk downloads on the Google Play Store. New in-app features and gameplay upgrades drove a sharp surge in engagement in Q4FY25.
- Monthly active users rose to 3lk in FY25 from 70,000 in FY24, a 329% jump. Its total user base stands ~50lk and is expected to reach 1cr in FY26, aided by game launches and higher retention.
- Average revenue per user (ARPU) stands ~INR900, with ~85% of earnings paid out to users under its rewards-driven model. Newly launched games achieved breakeven within 30 days, highlighting strong traction.
- META reported strong growth in FY25, with revenue rising 170% over FY24, driven by gaming, fintech, and blockchain operations. PAT grew 240% to INR18cr, aided by higher-margin revenue streams and improved operating efficiency.
- In H1FY26, it posted a revenue/PAT of INR232cr/INR22cr, implying a 10.5% PAT margin. The management reiterated its FY26 revenue/PAT guidance of INR1,000cr/INR 100cr.
- The company is setting up data centres in Hong Kong to strengthen its global digital infrastructure and support future Web3 and fintech expansion.
- The management is open to inorganic opportunities where synergies enhance scale, its technology capabilities, or international presence.

Valuation and view

Supriya Lifescience

nuvama professional clients group

We recently hosted the management of Supriya Lifesciences (SUPRIYA), a well-established active pharmaceutical ingredient (API) manufacturer. With over four decades of manufacturing expertise, it operates a backward-integrated business model and is a leading producer across key therapeutic categories such as antihistamines, vitamins, anaesthetics, anti-allergies, and anti-asthmatics. It offers a diversified portfolio of over 40 niche APIs and serves more than 1,500 customers in over 120 countries, underlining its resilient and scalable platform.
Its API portfolio comprises 18 backward-integrated products that contributed ~78% to H1FY26 revenue. Its financial performance has been healthy, with a revenue/EBITDA/PAT CAGR of 15%/26%/28% over FY23–25. SUPRIYA holds more than 50 registrations globally and plans to launch three to four products annually, expand into new markets, and capitalise on opportunities in contract development and manufacturing organisation (CDMO) and contract manufacturing organisation (CMO) to drive incremental growth. The stock is not rated.

CMP: INR722
Rating: Not Rated
Date: December 06, 2025

Bloomberg:	SUPRIYA:IN
52-week range (INR):	556/ 842
M-cap (INR cr):	5,806
Promoter holding (%)	68.30

Key takeaways from the management interaction:

- The company operates five manufacturing blocks, nine clean rooms, and a total reactor capacity of 932KLPD across 35,000 sq. ft. Capacity expanded by ~55% with the commissioning of Block E (335KLPD). Capacity utilisation stood at 70%/78% in FY25/H1FY26 and is improving as Block E ramps up, enabling deeper backward integration, product rollouts, and greater CMO and CDMO traction.
- Its portfolio covers over 40 niche products across anaesthetic, analgesic, antihistamine, vitamin, anti-asthmatic, anti-allergic, and anti-hypertensive categories. Exports to Europe, Asia, North America, and LatAm contributed ~81% to Q2FY26 revenue.
- The new Ambernath facility is nearing completion, with capitalisation expected in Q3FY26. WHO GMP approval is in place, enabling revenues from semi-regulated markets initially. EU audits are planned in H1FY27, and USFDA approval may be sought by FY27 end. The facility will be optimised over the next two to three years, with a focus on GLP-1 formulations.
- The 10-year exclusive CMO contract with Europe's DSM-Firmenich to supply a vitamin product is progressing on track. It is expected to generate INR25–30cr in FY26 and can peak at INR60–70cr over the next couple of years.
- SUPRIYA's collaboration with US-based Plasma Nutrition to introduce a highly bioavailable whey protein is expected to materialise in FY27–28, depending on the partner's formulation.
- It has multiple niche product launches scheduled for FY26, including a high-purity anaesthetic API (CEP/USDMF filing in process), a cardiovascular advanced intermediate (US DMF filing in process), an ADHD API (Q3FY26), and a contrast media product (Q4FY26).
- Around 18 products are backward integrated, contributing ~78% to H1FY26 revenue. It is integrating three additional products to optimise costs and strengthen its supply reliability.
- The company incurred INR42cr on capex in H1FY26. It plans to spend an additional INR40cr in H2FY26, primarily on the Ambernath facility.
- The management expects ~20% revenue CAGR, scaling to ~INR1,000cr by FY27. EBITDA margin is seen at 33–35%, a tad lower than recent peaks, but sustainable over the long term.

Valuation and view

The stock trades at INR722, at a P/E of 32x and an EV/EBITDA of 22x on a trailing 12-month basis. The stock is not rated.

Transrail Lighting

nuvama professional clients group

We recently hosted the management of Transrail Lighting. TRANSRAI has emerged as one of India's most integrated and diversified engineering, procurement, and construction (EPC) companies, operating across power transmission and distribution, civil construction, railways, poles and lighting, and solar EPC. Its backward-integrated manufacturing ecosystem spans facilities at Deoli (Rajasthan), Vadodara, and Silvassa, equipped with an installed capacity of 84,000mtpa/24,000km for transmission towers/conductors.
These facilities are aided by in-house design, engineering, and tower testing capabilities, enabling stringent quality control, competitive cost structures, and dependable execution of large and complex projects. With a well-established global presence, a strong track record of marquee project deliveries, and rising traction in emerging sectors such as solar EPC, it is strategically placed to benefit from the accelerating investments in power infrastructure and associated segments. The stock is not rated.

CMP: INR569
Rating: Not Rated
Date: December 6, 2025

Bloomberg:	TRANSRAI:IN
52-week range (INR):	375 / 856
M-cap (INR cr):	8,683
Promoter holding (%)	71.1

Key takeaways from the management interaction:

- The management raised its FY26 revenue guidance to 26–27% from 22% earlier, aided by strong execution and a robust order pipeline. Backward integration is helping sustain margin levels, contributing 150–200bp of incremental margin.
- Its focus is on national utilities such as Power Grid Corporation of India, ensuring healthy payment cycles and steady order visibility. Overseas, it only undertakes multilaterally funded projects to mitigate payment risk. It exports to the US, Europe, and Canada, with price-variation clauses built into contracts.
- The Bangladesh project is expected to be completed by July 2026. It has bagged several projects recently in Gujarat and Rajasthan, driven by the concentration of large solar parks in the region.
- TRANSRAI maintains a strong 2.8x book-to-bill ratio, with a total addressable market of INR1lk crore. Peers include Kalpataru Projects International and KEC International.
- It recently migrated from SAP HANA to SAP RISE, integrating broader AI-enabled tools across operations to improve efficiency and project management.
- Receivables that spiked in H1FY26 have now normalised.
- The focus is on 765kV and above transmission projects, a niche with only four to five capable players, aiding stronger margin profiles.
- Entry into solar EPC was driven by client demand given its strong execution capabilities. These projects are taken selectively, mainly outside India, and are expected to earn a higher margin than existing segments.
- The management sees the next leg of growth accruing from data centres and EV-related infrastructure, complementing its existing transmission and distribution strength and expanding an addressable market.

Valuation and view

At the CMP of INR569, the stock trades at a P/E of 18.4x and an EV/EBITDA of 9.35x on a TTM basis. The stock is not rated.

United Heat Transfer

nuvama professional clients group

We recently hosted the management of United Heat Transfer. Incorporated in 1995, UHTL has emerged as a diversified producer of thermal engineering solutions. Its product portfolio includes extended surface heat exchangers, shell and tube heat exchangers, air-cooled heat exchangers, pressure vessels, process flow skids, marine heat exchangers, charged air coolers, moisture separators, automatic backflush filters, and engine jacket water heat exchangers. These products serve critical applications across automotive, marine, compressors, oil and gas, refineries, and multiple process industries.
It operates two manufacturing facilities in Nashik, spread across a combined 1.2lk sq. ft. of covered workshop area. Led by a seasoned leadership team, comprising Mr Yogesh Patil (Chairman and Managing Director) and Mr Vivek Patil (Whole-Time Director), it has executed over 5,000 successful projects and supplied more than 75,000 heat exchangers to clients across 22 countries, underscoring its strong engineering capabilities and established presence in both domestic and international markets. The stock is not rated.

CMP: INR63
Rating: Not Rated
Date: December 6, 2025

Bloomberg:	UHTL:IN
52-week range (INR):	51 / 129
M-cap (INR cr):	131
Promoter holding (%)	67.60

Key takeaways from the management interaction:

- UHTL supplies to marquee industrial clients including Thermax, Kirloskar Brothers, Siemens, and Larsen & Toubro, reflecting strong credibility in the market. Its recently opened office in Pune is seeing healthy inquiries.
- The management expects EBITDA margin to sustain in the 15–18% range. To maintain profitability, it does not take up contracts where margin thresholds are not met.
- A data centre trial order is expected shortly, marking its foray into a high-growth space.
- Revenue is expected to grow 20–25% annually over the next three to five years, with potential upside depending on market conditions and client additions. Growth will be driven primarily by client acquisitions.
- Discussions are ongoing with a US-based manufacturer to outsource their production, which could open a new global revenue stream.
- Oil and gas is the largest industry vertical. Early supplies have been made for hydrogen manufacturing applications, a nascent but expanding market.
- UHTL is strategically focusing on air-cooled heat exchangers (ACHE) to cater to rising global demand and aid sustainable industrial processes.
- Growing exports is a key priority, with plans to boost the share of international revenue and scale its presence in the US and Europe as initial growth markets.
- Production capacity is being ramped up at its Talegaon (Nashik) facility, aided by process improvements and operational streamlining to meet growing demand.

Valuation and view

At the CMP of INR63, the stock trades at a P/E of 39x and an EV/EBITDA of 15.5x on a TTM basis. The stock is not rated.

Vaidya Sane Ayurved Laboratories

nuvama professional clients group

We recently hosted the management of Vaidya Sane Ayurved Laboratories. MADHAVBA is an Ayurveda-focused healthcare company, delivering treatment via its network of clinics and hospitals. Founded in 1999 and led by Dr Rohit Sane, it operates under the brand 'Madhavbaug' and combines traditional Ayurvedic therapies with modern diagnostics to treat a range of lifestyle and chronic diseases, with a strong emphasis on cardiac care.

Over the past two decades, it has expanded into a pan-India network of company-owned and franchise clinics, aided by four specialised hospitals, from a single centre, establishing a strong presence in preventive and disease-reversal healthcare. Financially, it posted healthy growth, with an EBITDA/adjusted PAT CAGR of 25%/32% over FY22–25. The management has guided at continued momentum ahead. The stock is not rated.

CMP: INR268
Rating: Not Rated
Date: December 6, 2025

Bloomberg:	MADHAVBA:IN
52-week range (INR):	81/ 313
M-cap (INR cr):	285
Promoter holding (%)	66.34

Key takeaways from the management interaction:

- MADHAVBA's care model is centred on disease reversal, with ~80% of patients completing the 12-month programme and ~80% of them achieving full reversal.
- The company operates ~320 clinics, including 22 owned, 45 OPD/mini clinics and 255 franchise clinics. Management aims to scale the network to ~1,000 clinics over the next three to four years.
- Clinics typically span 750–1,000 sq. ft. and are staffed with one Ayurvedic doctor, a receptionist, two therapists, and a community health executive. Clinics break even at INR 2.5–3 lakh per month and mature in 3–4 years to generate INR 5–6 lakh per month. Under the franchise model, MADHAVBA earns ~40% of franchise revenues.
- The company added ~60,000 patients in H1FY26 and targets ~120,000 in FY26 and 200,000–250,000 in FY27 across clinics. Each new patient contributes ~INR14,000 in enterprise-level revenue, with a 20–25% repeat rate.
- MADHAVBA operates four cardiac prevention & rehabilitation hospitals: Khopoli (50 beds; 80–90% occupancy), Nagpur (20 beds; 65–70%), Visakhapatnam (20 beds; 40–50%), and Vadodara (20 beds; ~20%). The group currently has 110 beds with overall occupancy at ~60% in H1FY26.
- Planned expansions include 100 additional beds at Khopoli, 80 at Nagpur and 80 at Visakhapatnam by FY27, taking total capacity to ~360 beds. Asset-light hospitals typically turn profitable at ~30% occupancy.
- At 80–90% occupancy over the next three to four years, the hospital network is expected to discharge ~1,650 patients per month, generating ~INR1,00,000 per patient with EBITDA margins of 40–45%.
- The company has integrated in-house manufacturing of proprietary Ayurvedic and nutraceutical products through subsidiaries Dynamic Remedies and UV Ayurgen Pharma, with plans to expand the portfolio further from previously outsourced lines.
- The newly launched product Madhavprash is seeing strong market traction, with current monthly sales of ~20,000 packs through the online platform and ~7,000 packs through the clinic network. The company aims to scale sales to 1 lakh packs per month over the next 24 months.
- The company also plans to manufacture ready-to-cook and ready-to-eat diet products through its in-house facilities.
- Management guides to revenues of ~INR120cr/~INR180cr/~INR280cr in FY26/FY27/FY28, supported by margin expansion to ~20%.

Valuation and view

The stock trades, at INR268, at a P/E of 33x and an EV/EBITDA of 17x on a TTM basis. The stock is not rated.

Veefin Solutions

nuvama
professional clients group

We recently hosted the management of Veefin Solutions. VEEFIN is a fast-scaling fintech SaaS provider specialising in supply chain finance (SCF) and digital lending solutions. Its portfolio spans SCF, lending (loan origination system or LOS, loan management system or LMS, and collections), transaction banking, fraud and risk application programming interfaces (APIs), and AI-driven workflow engines.

It operates via subsidiaries Estorifi Solutions, Infini Systems, Veefin Capital, and White Rivers Media (WRM), giving it full-stack capabilities from marketing-led origination to underwriting, onboarding, and collections. With clients like UCO Bank, HSBC, Jio Finance, and Rwanda's largest bank, and partnerships with over 15 fintech aggregators, VEEFIN has been expanding across domestic and global markets. Revenue grew 215% YoY to INR79cr in FY25, with a healthy margin and low leverage. The stock is not rated.

CMP: INR349
Rating: Not Rated
Date: December 6, 2025

Bloomberg:	VEEFIN:IN
52-week range (INR):	256 / 750
M-cap (INR cr):	863
Promoter holding (%)	35.2

Key takeaways from the management interaction:

- Integration with two banks under the PSB Xchange platform is complete, with three more in the pipeline. All banks sign the same long-term agreement, ensuring consistency and scalability across deployments.
- Customers are locked into seven-year exclusive contracts. The management expects high renewal rates given the limited competitive offerings and strong switching costs.
- The order book stands at INR396cr, with 35 active deals, including 10 large deals exceeding INR17cr each. Around 15% of deals are in advanced stages.
- Cross-sell and upsell are key growth levers, with the company adding trade, cash management services (CMS), and internet banking modules for existing SCF clients. Cross-sold products generate incremental margins above 70%, materially lifting revenue per customer and overall wallet share.
- High client acquisition costs and long sales cycles translate into a strong LTV. It sees no competitor able to match its pricing of 65bp, creating a strong competitive moat.
- Global expansion is underway, with leadership hired across regions and new offices being opened gradually. Product and engineering strength stands ~450 personnel.
- PSB Xchange adoption is increasing across government entities. A recent signing includes a state energy department with an annual procurement of ~INR40,000cr. The management expects other countries to adopt similar national platforms.
- A pan-India expansion is planned across 52 locations, with each location costing INR18–20lk annually. Breakeven for each location is achieved at INR100cr AUM, after which incremental revenue flows largely into profitability.
- The management is targeting INR5lk cr AUM over time, aided by a strong pricing model (30bp for business, 20bp for technology, and 15bp for onboarding).
- It maintains a lean operating structure to drive cost efficiency while scaling. All subsidiaries will be merged, with consolidation expected by August 2027.

Valuation and view

At the CMP of INR349, the stock trades at 50x P/E and 22x EV/EBITDA on a TTM basis. The stock is not rated.

Vikran Engineering

nuvama professional clients group

We recently hosted the management of Vikran Engineering. VIKRAN is one of India's fastest growing engineering, procurement, and construction (EPC) companies. It provides end-to-end services from conceptualisation, design, supply, installation, testing, and commissioning on a turnkey basis. With a presence in multiple sectors including power, water, and railway infrastructure, it has successfully completed 45 projects across 14 states. It is active in 16 states with more than 190 projects.

Its government clients include NTPC, Power Grid Corporation of India, South Bihar Power Distribution Company, North Bihar Power Distribution Company, Madhya Pradesh Power Transmission Company, Transmission Corporation of Telangana, Madhya Pradesh Madhya Kshetra Vidyut Vitran Company, District Water and Sanitation Mission (PHED), and State Water and Sanitation Mission (SWSM). It is also working on certain projects for Assam Power Distribution Company and the Danapur division of Eastern Central Railway. The stock is not rated.

CMP: INR96
Rating: Not Rated
Date: December 6, 2025

Bloomberg:	VIKRAN:IN
52-week range (INR):	91.7 / 118
M-cap (INR cr):	2,474
Promoter holding (%)	56.17

Key takeaways from the management interaction:

- VIKRAN operates on an asset-light EPC model. It intends to stay within this framework while focusing only on profitable, well-funded projects.
- It has executed projects in challenging terrains such as Arunachal Pradesh, Kashmir, and the Chambal region, strengthening its reputation for strong execution.
- Initially focused on power distribution EPC, it is now expanding into power transmission and sees sustained visibility in the broader power sector.
- Solar EPC is emerging as a major growth driver. It recently bagged three turnkey projects worth ~INR2,000cr with modules. Without modules, the value will be INR600–700cr.
- The overall order book stands ~INR4,200cr. Of this, solar/power transmission and distribution/water (JJM + AMRUT 2.0)/railways constitute ~50%/30–32%/18%/~2%.
- Future cash flows may be used to enter international markets or enhance evacuation and grid-integration capabilities. It is also preparing for solar and battery energy storage system (BESS) opportunities.
- The management believes the combination of a diversified state presence, a robust contractor network, and execution skills forms a sustainable competitive advantage and helps in maintaining a high margin.
- It is confident of sustaining its growth trajectory, backed by a robust order book, a favourable industry outlook, and continuous focus on execution excellence.

Valuation and view

Revenue/EBITDA/PAT grew 11%/99%/339% YoY to INR176.3cr/INR25.4cr/INR9.1cr in Q2FY26. Revenue/EBITDA/PAT stood at INR335.5cr/INR48.1cr/INR14.8cr in H1FY26. At the CMP of INR96, the stock trades at a P/E ratio of 29.2x and an EV/EBITDA of 13.2x on a TTM basis. The stock is not rated.

Vimta Labs

nuvama professional clients group

We recently hosted the management of Vimta Labs. Founded in 1984, VL is one of India's leading contract research and testing companies, known for its high-quality, technology-driven services, and deep industry expertise. It is in the business of contract research and testing in the fields of biologics, small molecules, agro-chemicals, food and beverages, electronics, clinical diagnostics, medical devices, home and personal care products, and environmental testing. It has a network of seven laboratories, including those related to various divisions located at its headquarters; one electrical and electronics lab; and six food branch labs in India. It achieved a revenue/PAT CAGR of 4%/18% over FY23–25. The management is targeting a revenue of INR500cr in FY26, which implies a growth of ~46% YoY in FY26. The stock is not rated.

CMP: INR592
Rating: Not Rated
Date: December 6, 2025

Bloomberg:	VL:IN
52-week range (INR):	372 / 903
M-cap (INR cr):	2,724
Promoter holding (%)	35.99

Key takeaways from the management interaction:

- VL operates a diversified, service-led model spanning contract research, analytical testing, and diagnostics, serving both domestic and international clients, with exports constituting ~40% of FY25 revenue.
- In H1FY26, it generated ~65% of revenue from Pharma vertical (preclinical, clinical, analytical), 20% from food testing, and remaining from Electronics & Electrical testing + Environmental testing.
- It recently commissioned an electronics and electrical testing chamber at its life sciences facility, strengthening its position in the fast-growing testing and certification (TIC) market.
- Its expanding portfolio and regulatory-driven demand continue to reinforce VL's position as one of India's leading players in the testing ecosystem.
- The company is widening its capabilities by focusing on biologics development and related testing services. It plans to offer clone development, process development, drug-product development, and biosimilarity assessments across new biological entities (NBEs), biosimilars, and peptide therapeutics.
- The company has expanded capacities in two phases; the first phase is already fully utilised, while the second phase is operating at 50–60% utilisation. The expanded capacity covers pharma, food, electrical & electronics, preclinical, and GMP (small- and large-molecule) testing.
- In H1FY26, the company incurred capex of INR47cr and maintains full-year guidance of INR100cr. It has earmarked INR50cr for biologics over FY26–FY27, with commercialisation targeted for Q1FY27. This strategic expansion strengthens long-term customer stickiness by positioning VL as an integrated end-to-end partner.
- It has labs only in India, with Europe and the Middle East being future growth areas.
- The management believes increasing environmental, social, and governance (ESG) norms will meaningfully grow the consultancy business.
- Industry growth prospects are favourable, with pharmaceutical analytical testing projected to clock 8% CAGR, reaching USD14.5bn by 2030.
- Preclinical services are expected to expand at 8.7% CAGR through 2034, aided by rising R&D.
- Non-pharma testing segments show strong momentum, with food/environmental/ electronics testing expected to reach USD36.2bn/USD9.3bn/USD4bn by 2030.
- Management has retained its FY26 revenue guidance of ~INR500cr (vs. INR200cr achieved in H1FY26). The current facilities offer a peak revenue potential of ~INR700cr, with a sustainable long-term growth rate of 16-18%. EBITDA margins are expected to remain within ±2% of current levels.

Valuation and view

Based on the management's guidance, the stock trades at a P/E of 27x and 24x FY26/FY27 EPS. The stock is not rated.

Vintage Coffee And Beverages

nuvama professional clients group

We recently hosted the management of Vintage Coffee And Beverages (VINCOFE), a Hyderabad-based manufacturer and exporter of instant coffee, instant chicory, and other beverages, with a strong focus on private-label solutions. Its product portfolio includes spray-dried coffee (SDC), agglomerated coffee, and instant chicory coffee, offered in tins, sachets, pouches, and bulk packaging. The company has an annual production capacity of 6,500mt, which is set to scale to 11,000mt by FY26.

VINCOFE is diversifying into freeze-dried coffee (FDC), a higher-margin category, with a planned capacity of 5,000mt by FY27, taking its total capacity to 16,000mt. To fund expansion, it raised INR215cr in July. The company was founded by Mr Balakrishna Tati, who brings over three decades of global sales experience. Its CEO, Mr C. Jawahar, is a coffee industry veteran with over 20 years of experience. We maintain our 'BUY' rating with a TP of INR250 (30x FY27E P/E).

CMP: INR163
Rating: BUY
Date: December 6, 2025

Bloomberg:	VINCOFE
52-week range (INR):	75 / 175
M-cap (INR cr):	2,351
Promoter holding (%)	34.08

Key takeaways from the management interaction:

- VINCOFE's manufacturing facility is running at full utilisation. Its FY26 order book is maxed out, providing strong volume visibility.
- The management is confident of a 4x increase in volumes over FY25–28, driving ~74% sales CAGR over the same period.
- A favourable shift toward higher-margin FDC and agglomerated coffee will aid EBITDA expansion as new capacities come on stream.
- With FDC contributing meaningfully from FY28, blended realisations and profitability are expected to rise sharply.
- Operating leverage, better utilisation, and a leaner working capital cycle will strengthen cash generation and enhance the Balance Sheet.
- Return ratios are expected to exceed 20% by FY27, led by margin expansion and efficient capital deployment.
- Profitability is expected to increase more than 5x over FY25–28.
- Revenue/EBITDA/PAT grew 106%/130%/166% YoY to INR237cr/INR40cr/INR32cr in H1FY26 driven by higher coffee prices and a ramp-up in volume.
- It is entering a high-growth phase, with capacity expanding ~4x by FY27 and premium FDC driving margin expansion.
- We expect EBITDA/PAT to compound at 87%/76% over FY25–28.
- With strong demand visibility and expanding profitability, the company is well-positioned for multi-fold earnings growth.

Valuation and view

VINCOFE is expanding capacity to 16,000mt by FY27, improving its product mix and strengthening profitability through entry into higher-margin FDC. Strong volume visibility, rising realisations, and operating leverage position it for a steep earnings trajectory. At current valuations, the stock trades at a discount to peers. We maintain our 'BUY' rating with a TP of INR250 (30x FY27E P/E).

V-Marc India

nuvama professional clients group

We recently hosted the management of V-Marc India. Led by Managing Director Mr Vikas Garg, VMARCIND is a fast-growing electrical manufacturer with a strong presence across India. It manufactures various types of wires and cables in single and multi-core with copper and aluminium conductors. Its wires and cables possess properties like flame retardant (FR), heat resistant flame retardant (HRFR), flame retardant low smoke (FRLS), and halogen free flame retardant (HFFR). It operates two technologically advanced facilities, with in-house laboratory support and rigorous quality controls. Over time, it has expanded its reach to 24 states, aided by a robust dealer network of over 1,200, enabling it to strengthen its brand presence across diverse markets. The stock is not rated.

CMP: INR612
Rating: Not Rated
Date: December 06, 2025

Bloomberg:	VMARCIND:IN
52-week range (INR):	200 / 805
M-cap (INR cr):	1,814
Promoter holding (%)	64.87

Key takeaways from the management interaction:

- VMARCIND operates two manufacturing facilities in Haridwar, spread across 50,000 sq. meters, aided by more than 650 employees, a network of over 1,200 dealers across 24 states, and 150 EPC partners.
- It operates in the cables industry that is pegged ~INR1lkcr and clocking ~14% CAGR. Its focus is on the low voltage (LV) and medium voltage (MV) segments that together constitute 76–77% of the addressable market.
- Its business mix spans B2G (~35%), B2B (~35%), and the fast-growing B2C segment (~29%) where it is steadily increasing its strategic thrust.
- Its product portfolio includes building wires, electron beam (EB) processed wires, solar DC cables, cross-linked polyethylene (XLPE) and EB-XLPE power cables, MV covered conductors, communication cables, automotive and EV wiring, and an outsourced FMEG range for channel penetration.
- EB crosslinking is a core technological strength, enabling higher temperature tolerance, superior current-carrying capability, longer life, and enhanced fire safety compared with conventional products.
- MV covered conductors are a standout category, with over 15,000km supplied in FY25. VMARCIND is positioned among the top three domestic players, offering both cables and its full accessory suite.
- In the B2C channel, the focus is on premium, performance-led offerings rather than competing on discounts. Its FMEG labelled products help expand its retail reach and improve its salesforce productivity.
- Installed capacity stood at 1,69,020km in FY25 and is being expanded to 2,12,600km in FY26, with a long-term target of reaching ~7,00,000km over the next five years.
- Annual capex of INR80–85cr is directed toward MV capacity additions, with multifold revenue potential and a typical three-to-four-month utilisation ramp-up for new lines.
- VMARCIND aims to enter the extra high voltage (EHV) segment up to 220kV, deepen participation in renewable energy projects, and expand into overseas markets.
- It is targeting 40–50% revenue growth in FY26, with an EBITDA margin of 11–12%.

Valuation and view

Based on the management's guidance, the stock trades at a P/E of 33x on FY26 EPS. The stock is not rated.

Yash Highvoltage

nuvama
professional clients group

We recently hosted the management of Yash Highvoltage (YASHHV), a Gujarat-based, ISO-9001 certified manufacturer of high voltage and high current transformer bushings that are critical for power transmission. Its most prominent products include oil impregnated paper (OIP), resin impregnated paper (RIP), and resin impregnated synthetic (RIS) condenser bushings. Amid growing demand for power globally, it is upgrading its product capability to 550kV from 245kV and expanding its capacity to capture the favourable industry tailwinds. The stock is not rated.

CMP: INR475
Rating: Not Rated
Date: December 06, 2025

Bloomberg:	YASHHV:IN
52-week range (INR):	617 / 145
M-cap (INR cr):	1,356
Promoter holding (%)	57.94

Key takeaways from the management interaction:

- Global investments in renewables, data centres, AI, and power infrastructure are generating an unprecedented demand for transformers and related components, resulting in strong order inflows for YASHHV, which is operating close to full capacity.
- The management expects this strong demand environment to persist until FY32, by which time they expect to emerge as a prominent industry player with a stable and consistent order pipeline.
- Around 80–82% of business accrues from domestic dry bushings, with exports contributing the rest. Exports generate ~1.5x of local revenue for a similar product. The total addressable market for their product portfolio is ~INR15,000cr.
- Competitors in the bushing segment include major players such as Siemens and Hitachi Energy, which together command ~75% of the market. The balance is shared by eight to nine players, including GE Vernova T&D India and CG Power & Industrial Solutions. YASHHV's products are priced 10–15% cheaper than those of Siemens and Hitachi Energy.
- The critical nature of the company's products and clients' reluctance to engage with new or unproven suppliers serve as major barriers to entry.
- YASHHV and Quality Power Electrical Equipments Ltd jointly acquired 100% of Sukrut Electric Company Pvt Ltd, a Pune-based transformer component manufacturer. The company may incur minimal losses over the next two years as it ramps up labour and capital investments, after which it is expected to begin generating meaningful revenue.
- It also plans to diversify its portfolio by adding new verticals through joint ventures or in-house product development, with a goal of generating over 30% of its revenue from non-bushing products over the next five years.
- Its new facility will enable manufacturing of products up to 550kV, up from the current 245kV, unlocking a new addressable market of INR15,000–16,000cr.
- Existing facility has a revenue potential of ~INR300cr while the new plant is expected to add another ~INR300cr.
- The management has guided at a conservative ~35% revenue CAGR. It aspires to achieve 4–5x its current revenue over the next five years.
- The new facility will enable in-house production of RIP bushing cores, significantly lowering dependence on imports from Switzerland and China. Over the next two years, import sourcing is expected to fall to 10–12% from ~40%, which should drive meaningful EBITDA margin expansion of ~30%.
- Pre-IPO, it delivered a RoCE of ~36%. The management expects RoCE to return to those levels by FY28.

Valuation

At the CMP of INR475, the stock trades at 43.4x P/E on a TTM basis. The stock is not rated.
